STYLE MANUAL

of the

UNITED STATES GOVERNMENT PRINTING OFFICE

SECOND EDITION, REVISED AND ENLARGED

APRIL 1935

By GEORGE F. von OSTERMANN
Foreign Reader

A. E. GIEGENGACK Public Printer

WASHINGTON, D. C. 1935

PREFACE

This manual relating to foreign languages is purposely condensed for ready reference and is intended merely as a guide, not a textbook. Only elementary rules and examples are given, and no effort is made to deal exhaustively with any one subject. Minor exceptions exist to some of the rules given, but a close adherence to the usage indicated will be sufficient for most foreign-language work.

In the Romance languages, especially, there are other good forms and styles

not shown in the following pages.

It is desired to acknowledge the assistance and cooperation of officials and members of the staff of the Library of Congress in the preparation of these pages and, in particular, Dr. Herbert Putnam, Librarian of Congress; Mr. Martin A. Roberts, Superintendent of the Reading Room; Mr. Charles Martel, Consultant in Cataloging, Classification, and Bibliography; Mr. Julian Leavitt, Chief of Catalog Division; Mr. James B. Childs, Chief of Document Division; Dr. Israel Schapiro, Chief of the Semitic Division; Mr. George B. Sanderlin; Mr. S. N. Cerick; Mr. Jens Nyholm; Mr. N. H. Randers-Pehrson; Mr. Oscar E. Mollari; Dr. W. Kloss; Mr. T. W. L. Scheltema; and Mr. D. Tuneeff; John H. Williams, Foreman, Library Printing Branch; also the Rev. James A. Geary, instructor in Celtic languages and comparative philology, Catholic University of America. Special acknowledgment is also due Prof. Romain F. Butin, of the Catholic University of America and a member of the Harvard-Catholic University Joint Expedition to Serabit in the Peninsula of Sinai in 1930, for his criticisms and suggestions on the origin of the alphabets.

Acknowledgment is also made of the helpful interest and suggestions made by the heads of the publication departments of the University of California, the University of Chicago and of Calumbia Stanford and Wall Hairweiting

versity of Chicago, and of Columbia, Stanford, and Yale Universities.

In the work on the languages of the American Indians, the officials and scientific staff of the Bureau of American Ethnology, Smithsonian Institution, extended generous cooperation.

PREFACE TO THE SECOND EDITION

It has been a source of gratification to note the enthusiastic reception accorded the initial edition of the Foreign Language Style Manual by bibliographers and editors, as well as scientists, in practically all countries of the civilized world.

The present edition has been revised and considerably augmented.

The editor takes this opportunity of acknowledging the valuable assistance of Dr. Shio Sakanishi and Mr. B. A. Claytor, of the Division of Orientalia, Library of Congress, for their valuable assistance, the former in the Japanese and the latter in the Chinese.

FOREIGN LANGUAGES

THE ALPHABET

The modern alphabet is derived from the Phoenician, through the Greek and Latin. The Phoenician, in turn, probably was patterned originally from the Egyptian hieroglyphics, which were given Semitic values.

The first man who desired to convey an idea other than by motions or speech drew a picture that would be understood by his fellow tribesmen. This can be illustrated by a drawing taken from an American Indian's message (fig. I, a), by which he wished to convey the information that he had gone by canoe for many sleeps to an island. This was drawn probably on the tanned hide of his tepee.

There was always a tendency, under stress of time and material, after writing began to be used, to conventionalize an earlier picture. This may be illustrated by the Chinese ideogram for mountain in its earlier pictographic and its later conventionalized form (fig. I, b). The Assyrian bull's head (fig. I, c) illustrates, in the primitive form, a greater advance from the pictographic; and, in the latter, what happened when the scribes began impressing cuneiform characters on wet clay with a wedge-shaped awl.

FIGURE I .- Development of writing: a, American Indian; b, Chinese; c, Assyrian; d, Egyptian.

The Egyptian writing dates from at least 4000 B.C. The cartouch (fig. I, d) contains the name of Send, a Pharaoh of the second dynasty, and is regarded as the earliest bit of writing extant. The Egyptian characters were of two kinds, the hieroglyphic that was cut on the wood or stone work of the temples, and the hieratic, written or painted on wood or papyrus, usually with a pointed reed. The hieratic forms were cursive and more rapidly written than the hieroglyphics, but their derivation from the older characters can be seen. (See fig. II, column 2.) The characters also began to lose their identity as pictures of objects and began to represent sounds, becoming true letters. For example, in the Pharaoh's name above referred to, the reading is not "bandage, water, hand," the original significance of the characters, but S N D (the vowels omitted, as usual with early writing).

The early Semites came into contact with the Egyptians on numerous occasions, one of which is narrated in the books of Genesis and Exodus in the Hebrew Bible. They learned the art of writing, and put it to use in their commercial ventures. Moses is thought to have been inducted into the Egyptian priestly class and to have learned to write, as the art of writing was confined to the priestly class at that time.

A connection between the Egyptian characters and the Phoenician characters, the oldest of which date from about 1850 B.C., is found in the Sinai inscription, discovered recently, which dates from about 1500 B.C. (See fig. II, columns 3 and 4.)

FIGURE II.—1, late square Hebrew; 2, Egyptian, a, hieroglyphics, b, hieratics, c, variant forms; 3, Sinaitic; 4, Phoenician (Moabite stone); 5, early Greek; 6, Latin capitals and uncials or cursives; 7, Modern roman capitals and lower-case.

The Phoenicians were great traders, and carried on an extensive commerce by sea, reaching as far, in their small vessels, as the British Isles. They communicated the art of writing to the Greeks, and the earliest forms of Greek writing are dated from the seventh to the fourth centuries, B.C. The earliest Latin inscriptions date from about the year 200 B.C.

The modern majuscule or capital letters owe their forms to the characters that were cut in stone on monuments, etc., and that required great care and time to produce. There finally grew up a more hastily produced flowing character, written first on papyrus and later on vellum with brushes, reed pens, and feather pens. This became the minuscule, or lower-case letter.

The earliest printed books were attempts to reproduce manuscripts by the use of movable type. The similarity between the Gutenberg Bible and contemporary manuscripts can be seen by comparing them, as may be done at the Library of Congress.

These manuscripts were written with a broad-nibbed pen that made heavy down strokes. From this originated the black-letter type, in which works on theology, law, etc., were customarily written and at first printed. The three German text types, the Fraktur, the Gotisch, and the Schwabacher, originated from the black-letter.

Lesser works, known as the humanities, were written in a simpler hand than the black-letter, which was reserved for the graver subjects. Printing followed the scribes in this respect, but the humanistic letters proved to be so much more legible that they were, after a while, used almost exclusively as a letter text in western Europe. It is from these that we have obtained the ordinary roman letter, called by the Germans "Antiqua". Finally Aldus invented the italic, so as to get more matter on a page.

In figure II, column 1 are given the square Hebrew characters, of a late form, but significant for comparison, and forming the best key letters available. In column 2 are the Egyptian (a) hieroglyphic, (b) hieratic, and (c) variant forms of the letters concerned. Column 3 gives the Sinaitic characters, column 4 the Phoenician (Moabite stone) alphabet, column 5 the early transitional Greek characters, and column 6 Latin capitals and uncials or cursives, some of them quite late, to illustrate the origin of upper- and lower-case roman. Column 7 gives the modern roman alphabets for comparison.

An attempt has been made to present in the text also some of the nonroman alphabets. The Far Eastern languages have alphabets all their own. The near eastern languages—e.g., Arabic and Coptic—have pursued a different course. The Cyrillic and Glagolithic were developed from the Greek, with the aid of some of the ancient runes for peculiar Slavic sounds. Modern Russian and the other Slavic alphabets have been romanized as nearly as circumstances will permit.

Capitalization

Use capitals as initials of geographic names, except when used adjectively; names of religions, sects, and church organizations; any name referring to the Deity; principal words in names of books, periodicals, and newspapers; principal

¹ A syllable ending in a consonant is closed; in a vowel or diphthong, open.

By act of the Parliament of the Union of South Africa, Afrikaans has been adopted as the official language.

words in titles of articles, etc.; titles of honor; names of months, weeks, and feast days, and also any word to which the writer wishes to direct special attention.

The article 'n is not capitalized, even though it occurs at the beginning of a

sentence.

ALBANIAN

ABCÇDDE ÉFGGHIKJLLLMN	a b c c ç d dh e ë f g g h i k i l l m n	a in father b ts in nets ch in church d th in father e in end a in table f g in garden gy sound in exiguous h; almost kh ee in greet k y in young gl in Italian egli ll in wall m n	NJ O P Q R R R S S H T T H U V X X H Y Z Z H	nj o p q r rr s sh t th u v x xh y z zh	ni in opinion o in only p ky sound in (always) r, weak r strongly trilled s sh in shut t th in thin oo in ooze v dz in adze dj in adjective u, French z s in pleasure	cute
-----------------------	--	---	---	---	---	------

The Albanian was formerly written in Turkish, Greek, and Latin characters in the different parts of the country, but Latin is now the official script for the two principal dialects, Gheg and Tosk, and there is evidence of a strong Latin influence in the root words, as also in capitalization.

Syllabication

Division is on the vowel, with a consonant going with the next syllable; if there be two consonants they may be divided, unless it be the indivisible dh, gj, ll, nj, rr, xh, or zh.

Accent

The stress generally, though not always, falls on the next to the last syllable, e.g., Pipilo; but also Vasil (Basil), and k'ungulli (pumpkin); the accent is seldom written, however, but when the circumflex is used it indicates that the vowel is strongly nasalized.

Articles

The indefinite article (nji) precedes the noun and is variable for both masculine and feminine.

The definite article is *i* for masculine singular, *a* for feminine singular, and *t* for both masculine and feminine plural. It is never a separate word, but always a suffix, e.g., *mal*, mountain, and *mali*, the mountain; *are*, field, and *ara*, the field; *male*, mountains, and *malet*, the mountains; *ara*, fields, and *arat*, the fields.

male, mountains, and malet, the mountains; ara, fields, and arat, the fields.

The attributive article is always a separate word and is found before every attributive genitive, most adjectives, and all possessive pronouns. It agrees with its antecedent noun in number, gender, and case.

¹ The kw or qu sound is represented by cw; cs has value of x.

² This letter has two values. In the initial and final positions, in the combinations ff, fs, ft, and in the medial position it has the usual (voiceless) sound; between vowels and voiced consonants it has the sound of v.

*Almost always like g in German sagen or like y in you, according to its pronunciation with guttural or palatal vowels; when doubled it is pronounced like g in go; cg sounds like dg in ridge.

*Like h in German ach when guttural, otherwise as h in German ich.

5 These two characters are used without distinction to give the th sound as in thin, expect between Youngly and record records that the reject of the respective th is a representation.

cept between vowels and voiced consonants where the voiced spirant is employed, as in thine. The second is called "thorn."

The Anglo-Saxon is of Teutonic origin; introduced into England about the fifth century, the West Saxon dialect became dominant for literary purposes during the reign of Alfred the Great (871-901), and maintained its supremacy until the close of the Anglo-Saxon period.

The following is a sample of one of the Anglo-Saxon faces of type used in the

classical period:

Capitals: ABLDEFLBIKLONOPRSTUPXYZD \$\rightarrow{3}{2} Lower case: abcberzhibklmnoppprzupxyz8

Diphthongs

The diphthongs are ie, ie, ea, ea, ea, eo, eo, io, io, io, and these (both long and short) receive the stress on the first element, the second, being unaccented, is very much obscured in pronunciation; ea, ea is equivalent to ae + a (perhaps more nearly ae + uh); otherwise the component parts will be pronounced as shown in the table.

Accent

Simple words are accented on the first syllable, while substantive compounds receive the stress on the first and the accent of the second component is usually retained as a secondardy stress. A verbal compound is accented on the radicle syllable of the verb, the prefix being unaccented.

¹ Also Kāf.

² Also Vāy.

The expansion of Islam during the 7th and 8th centuries spread the Arabic language over many countries where it is spoken in one form or another and sometimes in connection with a local language. Its influence is manifest even in modern Spanish. There are dialectic differences even in Arabia, but the written language has almost invariably conformed to that type which is called "classical Arabic

Most pure Arabic words can be traced back to a triliteral root, and some of two consonants only. For instance, from the root ktb (write), we get katabnā (we wrote), naktuba (we will write), katib^{un} (writing, a writer), etc.

The Arabic verb has but two tenses: Perfect and imperfect. The meaning

of the simple verb may be modified by the addition of one or more letters to the root, in which manner about 14 conjugations may be formed.

There are two articles: Definite, al (the) preceding the noun, and the indefinite, un (a, an) attached to the end of a noun, etc., al maliki (the king); malikun

(a king).

There are two declensions of nouns in the singular and only two genders,

masculine and feminine.

With the exception of the first two, which are adjectives, the cardinal numbers are all substantives and are followed, from 3 to 10, by the genitive of the broken plural whenever possible, taking the feminine form when the objects numbered are masculine, and vice versa; from 11 to 99 by the accusative singular, and from 100 to 1,000 by the genitive singular.

There is no record of any written Arabic literature prior to the Koran, and the booms and proverbs of the northern Arabs really form the beginning of Arabic

literature.

-The characters Ain and Ghain appear to be hard gutturals; Ghain is Note.always g, but from a grammatical standpoint Ain cannot be well defined in any of the three Near Eastern languages. While at best it has only a very short sound, it cannot be omitted from the alphabet because of the effect it has on the proper pronunciation of the words.

It is also considered a vowel, especially at the beginning of words, taking the place of $a, \bar{a}, i, \bar{\imath}, u, u$. In a median position it generally takes the place of i or ii, depending mainly on the proper relation of the words and its nearest tran-

scription and pronunciation into the Latin alphabet.

ARMENIAN

 $^{{}^1}L=i$ instead of e in the ending kulu or kulu u in family names, e.g., Dashian not Dashean.

This table shows the vertical and slant letters of Armenian with their English equivalents. In the roman transliteration columns, the first letter represents "classical" Armenian; the second letter (in parentheses) modern Armenian usage, when it differs. In case the latter mode is followed, letters enclosed in parentheses must be used to avoid confusion.

Vowels are: $\boldsymbol{\mu}(a)$, $\boldsymbol{h}(e \text{ or } ye)$, $\boldsymbol{f}(\tilde{e})$, $\boldsymbol{\mu}(\check{e})$, $\boldsymbol{h}(i)$, $\boldsymbol{n}(o \text{ or } wo)$, $\boldsymbol{L}(u \text{ or } v)$, $\boldsymbol{o}(\tilde{o})$.

Compound vowels: we, wy, hw, ho, he, he, ne and ny.

Diphthongs: hw, ht, hn, ho, hne, neh, net, new, nen, tn, tne and th.

Contractions: L for LL, and Hu for Mu.

Capitalization is the same as in English

Accents are not used in Armenian.

Syllabication

Articles

Indefinite article $u_{\underline{L}}$ (a or an) follows the noun to which it belongs. The $u_{\underline{L}}$ becomes $u_{\underline{L}}$ when it is followed by a word which begins with a vowel, as $u_{\underline{L}}$, $u_{\underline{L}}$,

Definite article L (the) is added to the end of nouns terminating in a conso-

nant, and h to nouns ending in a vowel.

Figures

Figures (1, 2, 3, etc.), are used as in English.

The letters of the Armenian alphabet are also used as numbers. [In classic literature a line is generally placed over the letters when used as numbers]:

1	f	10	£	100	rL.	1000
2	þ	20	ıs.	200	ES.	2000
3	,	30		300	4/	3000
4	Ĵυ	40	<u>ኔ</u>	400	ш	4000
5	&	50	2	500	_{[1}	5000
6	4	60	n	600	_	600 0
7	4	70	٤	700	_	7000
8	ð	80	щ	800	ıþ	8000
9	Z	90	٤	900	ę	9000
	3 4 5 6 7 8	2	2	2	2	2

The new letters o and \$\mathcal{D}\$ have no numerical value.

1 Takes sound of d' when followed by é or i.

When it follows d, n, t, these letters take soft sound of d', n, t', and \check{e} then sounds like e. Cocurs only in foreign words.

4 Sound of ny when followed by ě or i.

 \tilde{N} is used quite frequently for \tilde{n} in modern publications.

6 Peculiar to Bohemian.

q, and x appear only in foreign words.

g, q, and x appear only in foreign words.

The Bohemian language is divided into three dialects—Pure Czech, Moravian, and Slovak. As in many of the other continental countries, the Latin alphabet has replaced the German.

Stress is invariably on the first syllable.

Vowels with the acute accent are sounded long.

Punctuation is according to the general rules of the English language.

Syllabication

Division occurs after a vowel, as stra-ka, ba-vl-na. In the second syllable of the latter it will be observed that l (as also is true of r and v), frequently has the characteristics of a vowel.

The consonants δk , δk , δt , δt , and δd must not be divided, and they form the

beginning of a syllable.

Division also occurs between two vowels or two consonants.

When l, r, or ř occur before a vowel, they also take along the preceding consonant (with the exception of n), and also the indivisible consonants sk, šk, st, št, and sd.

O II P	п р	p r	<u>я</u> —	я ж³ iж⁴	ya in yard u in but iu

¹ When B is mute it is for the purpose of rendering the preceding consonant hard; when B is mute, it ren-

ders the preceding consonant soft.

² In an accented syllable often pronounced like the \mathfrak{A} (ya).

³ This letter originally occurred in Old Slavonic and had a nasal pronunciation. Now, however, nasals are found only in some of the Bulgarian dialects.

⁴ This letter seems to be going out of use, being sometimes supplanted by \mathfrak{A} , pronounced very short.

The Bulgarian language belongs to the southeastern Slavic group; but during the 500 years of Turkish domination it has absorbed many foreign elements, both from the Turkish and from the languages of the neighboring states. Outside of ecclesiastical works the alphabet used is that of the Russian Cyrillic plus the addition of two Bulgarian characters, x and ix. The vowel sound ö of the z of the old Bulgarian Cyrillic is retained. The final z is mute.

Punctuation is very similar to that in the English language.

Initial capital letters are used for all proper names, including proper adjectives; also names of months and days of the week.

Syllabication

Division of words is the same as in the Russian (p. 147).

This alphabet is borrowed from the old rock-cut Pali of India, and thus, together

with a number of its words, is of Indian origin.

The language is monosyllabic and agglutinative, and is more nearly like the Chinese than the Indian. A single syllable may have a great many meanings, depending on the tone used or the manner in which the syllable is stressed. In writing, these syllables are differentiated by accents (points) which are placed under or after the characters. A point under the character indicates the soft or acute accent, while two, one above the other, after the character indicate the grave accent.

With English, Burmese is the official language of Burma, although Hindostani

is widely spoken.

CATALONIAN

Char-Tone value acter a in Spanish; a in French Paris; a in French âme; e in German Gabe a b

k: kk after accent; q before voiced tone; mute in nc; s before e c

s before a, o, u; z, voiced, before m k; occurs only in chor, choral, chorista ch

d as initial and before or after consonants; th between vowels and voiced consonants; t before unvoiced tone and as final; q in combination di; mute after n and between r and s

e, open, in French mère; e, closed, in French \acute{e} ; as in German Gabe

f g, hard, as initial and before a, o, u, and a consonant in the initial g syllable; gg in the combination gl, but only when it occurs after the stressed syllable; k, when before final mute s; g, medium soft, between a vowel and mute consonant; g, soft, when initial before e or i; gg, soft, in the combination tg or ig; ch in the combination (final) ig; French j when initial before e or i; ng as in ring before n

gu g, hard, before e or i; g, medium soft, after a vowel and before e or i; gu before a; gu, medium soft, after a vowel and before a

gw in Gwendolyn, before e or i

gü h Always mute

i e in we

e

j in Jew when initial; otherwise French j k; occurs only in foreign words

j k

l l, when initial and elsewhere when between vowels; l in milk when at close of a word or syllable; lj in combination tl

1.1 ll, generally pronounced as a single l

11 ll, like ll in Spanish gallo

m

n; ng before c or g; sometimes nj before ll or x; m before a labial n

ny \tilde{n} , as in Spanish

o, open, as in French mort; o, closed, as in German so; u in unstressed syllables

p, before and between consonants; like Italian p before vowels; p pp in the combination ple, when after the stress; b when final and the following word begins with a voiced tone; mute after m

qu k, before e or i; qu as in English before a or o

qü qw, same sound as in question

r, weak lingual between and after vowels and after all consonants, except l, m, n; rolled lingual when final, after l, m, n, or when doubled; mute when final in -er, -ar, -or, or in carnselada

s, voiceless, sharp, when initial of word or syllable after a conso-S nant, as well as before a mute consonant or at the end of a word, and in ss; z, between vowels, before vowels and h, and after n; mute in the combination igs

t, before and between consonants; Spanish t before a vowel; d, t before a voiced sound; g, in the combinations tg, tj; ce, ci in tx; mute when final after n, l; before ll; in the verbal ending

-itzar = iza; before m, and between r or s

CATALONIAN—Continued

Character

Tone value

- u, closed, as in German Uhr; mute when the preceding word ends in a vowel; \ddot{u} , which occurs in the combinations $g\ddot{u}$ or $g\ddot{u}$ before e, has the gw or qw sound
 - b, when initial and after a consonant; v, bilabial between vowels
- ks, in the prefix ex- before a mute consonant; gz between vowels; X š, ts sound, when initial, when initial after a consonant, when final, and in the combinations ix; ce, ci (Italian) in combination tx; z in combination ix between vowels in syntactic combinations; $\check{g}\check{g}$ in combination tx between vowels, as also before voiced consonants in syntactic combinations
 - s in German Rose, when initial or toward end of word; unvoiced, sharp s after t

Note.—y occurs only in the combination ny.

Catalonian is the language of 4,500,000 people living in a long and rather broad district extending along the eastern border of Spain, the island of Sardinia, and in the French Département des Pyrénées Orientales. There is an extremely wide divergence in the dialects spoken in the different districts, but Central Catalonian, which is used in Barcelona, is the literary language of the present. Catalonian is one of the so-called Romance languages.

Accents and signs

The grave and acute accents are used to indicate not only stress but also the quality of the vowel bearing the accent. The grave denotes the open and the acute the closed vowel. The a takes only the former, i and u only the latter.

The cedilla c is used for the unvoiced s sound before a, o, or u.

The apostrophe indicates the elision of a vowel, as l'home, the man.

The hyphen is used to divide syllables, in compounding, and to connect the verb and the personal pronoun: pa-re, father; compta-gotes, drop counter; vestir-se,

The dieresis is used on the i to denote that it does not form a diphthong with the vowel preceding, and on the \ddot{u} to show that the u is to be sounded in the

combinations gue, gui, que, qui.

The stress is either on the last syllable, or, most often, on the penult or the antepenult. In view of the uncertainty of locating the proper stress, it is suggested that a sign be used only in case the stress is on the antepenultimate or on the last syllable, and thus all words not bearing a written accent would be stressed on the penult.

Syllabication

A single consonant goes with the following syllable: ne-bo-da, niece; the same is true of the semiconsonants i and u when between vowels: es-gla-iar, frighten; pe-ua-da, footprint; also the second of a double consonant: im-mo-bil, immovable. The combinations bl, br, cl, cr, dr, fl, gl, gr, gu, ll, ny, pl, pr, qu, and tr also go with the following syllable. The first of a double consonant does not go over, and the prefixes des, en, and trans always remain intact.

^{*} Indicates the more important of the radicals.

Note.—The superior figures in the "sound column" indicate the number of the tone used.

A large percentage of the Chinese characters are a combination of two parts, the radical and the phonetic. The radical is a key indicating the group to which a given character belongs. This is the most important function of the radical. In many cases, however, it gives a hint as to the meaning of the character. At present there are 214 radicals, which, for convenience, are grouped according to the number of strokes they contain, i.e., the number of lines required to write them. Not all of the 214 radicals represent, in and by themselves, complete words, many serving only as mere roots from which full-meaning characters are constructed. The radical may be written at the top, bottom, left, or right of the character of which it is a component part, but its usual position is at the left. Many radicals change their form when written as parts of other characters. (See table.)

Romanization

Among English-speaking peoples, Sir Thomas Wade's system of writing the sounds for Chinese characters has been adopted as standard. The romanized sounds for all the characters number about 400 and are derived from combinations of 27 "initials" and 40 "finals." In some "sound groups" as many as 26 characters, all written differently with different meanings, have the same romanized spelling. The initials are: $a, \, ch, \, ch', \, \hat{e}, \, f, \, h, \, hs, \, i, \, j, \, k, \, k', \, l, \, m, \, n, \, o, \, p, \, p', \, s, \, sh, \, t, \, t', \, ts, \, ts', \, tz, \, tz', \, w, \, and \, y.$ The finals are: $a, \, ai, \, an, \, ang, \, ao, \, \hat{e}, \, eh, \, ei, \, \hat{e}n, \, \hat{e}ng, \, i, \, ia, \, iang, \, iao, \, ieh, \, ien, \, ih, \, in, \, ing, \, iu, \, iung, \, n, \, ng, \, o, \, ou, \, rh, \, u, \, ua, \, uai, \, uan, \, uang, \, ui, \, un, \, ung, \, uo, \, u, \, u, \, uan, \, ueh, \, un.$

Tone

The tones are regular vocal modulations which result in different inflections of the same sound, so that a Chinese sentence spoken slowly with the tones clearly brought out has a sing-song effect on the foreign ear. The tone is as essential to the word as the sound itself, and, like the latter, it is not fixed, but is in a constant state of evolution, as illustrated in the differences of intonation in the various dialects spoken in different parts of China. Four tones—the even upper, even lower, rising, and falling—have been distinguished, and in the Cantonese dialect each of these is again divided into an upper and a lower series and a ninth tone has also been added. In speaking, it is not necessary to give each word its full tonic force, since quite a number of words, such as the enclities, have no intonation whatever, while in others the degree of emphasis depends on the tone itself as also, at times, on the position of the word in the sentence.

[†] Indicates complete characters as well as radicals.

Digits

	Transliteration	Common form	Commercial form ¹	Special form ²
1.	i	, -	1	式の意 頭の式 金の式
2	erh	=	11	貳or式
3	san	=	1)]	叁or式
4	szu	四	×	肆
5	wu	五	४	伍
6	liu	五六七	مله	陸
7	chi	七	=	陸 柒
8	pa	八	圭	捌
9	chiu	九	文	玖
0	ling	零	0	

¹ These are supposed to be of Graeco-Bactrian origin but are known by the Chinese as Soochow or business characters. When 1, 2, and 3 come together, they are written alternately vertically and horizontally.

² These are used on drafts, pawn tickets, etc., as being less liable to fraudulent alteration.

Sixth ti4-	liu ⁴ 第六	Twelfth	ti4-shih2-êrh4	第十二

Dates

In China two methods are used to record a date; first, the method of the cycle; the year 1864, for example, is called the chia tzŭ year. This system is unsatisfactory; the combination chia tzŭ occurs every 60 years, and so an indication is usually given pointing to the particular cycle, e.g., Tung Chih chia tzŭ year. Tung Chih is the reign-title or nien-hao of the Manchu emperor who ascended the throne in 1862. The chia tzŭ year of his reign was 1864. The other method is by the reign-title or nien-hao of the emperor, together with a number which indicates the year of his reign: Tung Chih 3d year is equivalent to our 1864. The year 1934 is recorded as the 23d year of the Republic of China: Chung hua min kuo erh shih san mien. hua min kuo erh shih san nien.

Days

The days of the week are indicated by the use of the term for Sunday, followed by a figure. For example, Monday is <code>hsing-ch'i-i</code>, first day of the week; Thursday is <code>hsing-ch'i-ssŭ</code>, the fourth day of the week, etc. Two terms are in general use, <code>hsing-ch'i</code> and <code>li pai</code>, which, standing alone, also mean week.

Sunday	li³-pai⁴-jih⁴	禮拜日	Thursday	li³-pai⁴-ssŭ⁴	禮拜四
Monday	li³-pai⁴-i¹	禮拜一	Friday		禮拜五
Tuesday		禮拜二	Saturday	li³-pai⁴-liu⁴	禮拜六

hsing¹-ch'i¹}	week		·

Surnames

Chinese surnames are usually written first, followed by the personal name, thus in the name K^i ang Yu-wei, K^i ang is the surname, not wei. Personal names can usually be distinguished by the hyphen.

This language, which was doubtless descended from the ancient Egyptian, was used by the Egyptians during the period beginning early in the third century of the Christian era. The early evangelizers adapted the Greek alphabet to the various Egyptian dialects, retaining, however, seven Demotic characters, which are shown at the end of the table.

In translating religious writings from the Greek the language became highly impregnated with Greek words, but managed to survive as the language of the country until the 16th century, when it yielded to the Mohammedan invaders, and a corrupted Arabic dialect took its place, relegating the Coptic to purely religious uses just as the Latin is in the Roman Catholic Church.

The Coptic literature is principally religious and appears in five dialects: Sahidic, Akmimic, Memphitic, and Fayumic in Upper Egypt, and Bohairic in

Lower Egypt.

The letter $k\bar{a}i$ is used only in the Bohairic dialect and the di is merely a dau surmounted by a $j\bar{o}da = ti$.

In the Sahidic, numbers were generally spelled, while in the Bohairic they were represented by the Greek-letter numerals.

In Coptic manuscript the words were never divided, but in printing, for the sake of appearance, they are divided so that each part may remain as a complete entity.

The Greek punctuation marks were used in later Coptic printing.

DANISH

A	a	a in rather; also a in cat	0	0	o in rot; also o in globe
B	b	b	P		p in pay
č	c	k before a , o , u ; s before	Ō	p q	k; kv is usually substi-
O	C	other vowels	W.	Ч	tuted

_		tween vowels	$\underline{\mathbf{S}}$	S	s, sharp
E F	е	a in care; also e in met	\mathbf{T}	\mathbf{t}	t
\mathbf{F}	e f	f	U	u	u in full; also u in true
G	g	g, hard initial, soft final,	V	∇	v
	0	and sometimes mute	W	w	v
		between vowels	X	X	ks, which is usually sub-
H	h	h, mute before j and v			stituted for x
T	i	<i>i</i> in flit; also <i>ee</i> in flee	v	*7	ü in German über
j	:		YZ	У	
J.	ļ	y in yet		\mathbf{Z}	8
K	k	k	Æ	æ	ä in German Fähre
L	1	l	Ø	ø	ö in German Götter
M	m	m	AA	aa	aw in law
N	n	n			

The Latin alphabet is universally used in Denmark, with the addition of x, ϕ , and aa.

The c, q, w, x, and z are used only in words of foreign origin and in proper names; aa is not a double a, but a single letter; it is sometimes placed first in the alphabet. The sound of av is like au in the German word lau, aj, eg, and ej like i in pie, and oj like oy in boy.

Accents

Ordinarily accents are used only in foreign loan words and in certain proper names.

Capitalization

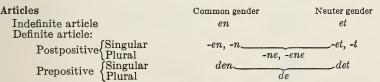

In the official Danish language all nouns are capitalized; however, some modern authors tend to follow the English usage.

Syllabication

A consonant between two vowels usually goes with the following vowel (ta-le); when two or more consonants occur between two vowels, the last consonant generally goes with the following vowel (brænd-te); sk, sp, st and str are usually not separated, but added to the following vowel (hvi-ske, læ-spe, bed-ste, ven-stre). Compound words are divided according to their component parts (Kirke-gaard, ind-til).

Punctuation

The punctuation in the official Danish language rigidly follows the clausal construction of the sentence, especially in regard to the use of the comma; however, many modern writers tend to follow the English usage.

The postpositive article, which is suffixed to the noun, is always used when the noun is definite in sense; the prepositive article is used when the noun is modified by an adjective.

The Sanskrit, Hindī (Hindustani), Marathi, Guajarātī, as well as quite a number of modern Indian languages use the Devanāgarī alphabet, which has been in process of development from more ancient languages ever since the 7th century of the Christian era. There are neither lower case nor italics and the text reads from left to right.

Consonants always end with short a sound, and are classified as gutturals, palatals, cerebrals, den-

tals, labials, sibilants, and aspirates.

The vowels can each be expressed by two different characters. Those shown in the first column of the table occur only when they form an independent syllable at the beginning of a word. Besides these we also have the following vowel signs which are placed above, below, before, or after the consonants:

	after before	8	$egin{array}{ll} r & ext{below} \ ar{l} & ext{below} \end{array}$
•	after	30	
y i	ι below		ai above
	ī below	-	o above and T after
c?	below		au above and T after

- · Anusvāra Show nasalization of vowels and · Anunāsika are placed above the characters : Visarga
- + Jihvāmūlīya - Upadhmānīya

 Aspirate signs, of which the first is most commonly used
- under the letter indicates lack of stress or the primary stress of the syllable
- over the syllable indicates the secondary stress
- Virāma (below) indicates absence of vowels
- At the end of a phrase

 At the end of a sentence
- S Used in dividing words and also indicates the elision of an a after e or o, or the union of aa
 - Over a consonant indicates that an r sound precedes the consonant
 - Under a consonant indicates that an r sound follows the consonant

Numerals

9 2 3 8 4 & 9 E 6 0 1 2 3 4 5 6 7 8 9 0

In Devanagari the words are spelled exactly as they sound, so that if a person knows how to speak Hindi he will have no difficulty in learning to read it, it being merely necessary to learn the alphabet.

Continental sounds are used in the transliter-

ation.

DUTCH

The Dutch use 26 Latin letters; but of these, c, q, x, and y are used only in foreign words. They have a unique ligature, ij, which in manuscripts is very often changed to \ddot{y} . When this ligature is the initial letter of a word at the beginning of a sentence, both are capitalized: IJs, ice; IJverig, zealous.

As in the German, the principal part of some compounds is written but once: Taal-, lees-, en schrijfboeken, grammar-, reading-, and copybooks.

Capitalization

Capitalization is very much the same as in English. The following exceptions should be noted:

When the first word of a sentence is represented by one letter only, the second word has the initial capital: 's Avonds 's het koud, in the evening it is cold.

The article or preposition between Christian and family names is not capitalized: Jan ten Brink, Mathias van der Velde.

Personal and possessive pronouns referring to the Deity are capitalized.

While ik, I, is lower-cased, the personal and possessive pronoun of the second person are capitalized: Gisteren heb ik Uw brief ontvangen, Yesterday i received Your letter.

Accents

The circumflex indicates that two syllables are contracted into one: Daân,

deeds; $Go\acute{o}n$, gods; $li\acute{e}n$, people.

The dieresis is used to indicate that two vowels are to be pronounced separately: Zeeën, seas; met drieën, with three; oliën, to oil. However, if two vowels cannot represent a regular sound, the dieresis is omitted: Israeliet, modeartikeln.

The acute and grave accents are used for stress on a vowel: één gulden, one florin; but een gulden, a florin; daar is het, there it is; daar is hij eindelik, there he is finally; en de een en de ander, the one as well as the other; of dit of dat, either this or that.

Syllabication

Avoid dividing short words as much as possible, but where necessary observe the following rules:

In compound words the component parts of each word must remain intact:

Eer-ambt, post of honor; door-een, together; elk-ander, each other.

Words with prefixes be-, ge-, her-, etc., or with suffixes, -aard, -achtig, must be treated the same as compound words in dividing.

A single consonant between vowels is added to the following syllable, as dee-len, to divide; ne-men, to take; la-chen, to laugh; li-chaam, the body; note that ch is inseparable.

Where two consonants occur together, they are split: ber-gen, mountains; gan-zen, geese.

In the case of three or more consonants division is phonetical: vor-sten, monarchs; ven-ster, window; but amb-ten, offices; erw-ten, peas; art-sen, doctors; koortsen, fevers.

Foreign words, or those of foreign origin, are divided according to pronunciation: le-proos, leprous; A-driaan, Adrian.

J ¹ Ĵ	j	y in yet	V	v	v
Ĵ	ĵ	s in pleasure	Z	\mathbf{Z}	z

 $^{^1}J_i$ slike the English semivowel y, and therefore at the end of words forms the diphthongs aj, ej, oj, and uj. 2U forms with a and e the diphthongs au (pronounced like ou in house), and eu (pronounced like the words eh and who, quickly uttered, without any aspirate, eh-hoo).

Esperanto is a "made" language intended by its inventor, Dr. Zamenhoff, to become a ready medium of world communication. Radicles are taken from various languages to which a system of suffixes is added to provide a grammatical structure.

Accent

The principal accent is always on the antepenult, third from last syllable.

Syllabication

A syllable is necessary for every vowel regardless of how many come together; there are no double vowels: tra-i-re, bo-a-o, me-ti-ist-o, zo-o-lo-gi-o.

Punctuation

The present custom is for each writer to follow the rules of his own language since it is impossible to change the meaning of a sentence by punctuation, as is often the case in English.

Capitalization

Considerable latitude is permitted in the use of capital letters, but certain seemingly international styles have been adopted. Names of countries are capitalized, but the names of races, with the correlative adjectives and adverbs, are not: Francujo, France; franco, a Frenchman; franca, French; france, in French. The same rule applies to churches, orders, and political parties. The names of the days of the week are not capitalized.

The Ethiopic language is known as Geez by the natives and belongs to the southern group of the Semitic languages. It is very much like the dead Arabic dialect known as Himjaritic, and, until the Amharic displaced it in the 14th century, was the prevailing language in Abyssinia. At the present time it is merely the ecclesiastical language.

The alphabet is itself a development of the Himjaritic and formerly read from right to left, like all Semitic languages, and consisted of consonants only. Since the introduction of Christianity it has been changed to read from left to right and, with the addition of hooks and circles on certain consonants, has obtained vowel sounds.

The Amharic, named after the Abyssinian kingdom of Amhara, is at present the commercial language of the entire country. It is closely allied to the Ethiopic language, using that alphabet in addition to the characters shown above.

The continental sounds are used in the Romanization of the alphabet.

FINNISH

The last seven letters, b, c, f, q, x, z, and d, occur only in foreign words and proper names and are never found at the beginning of pure Finnish words.

Since 1883 the Suomi, or Finnish language, has, in common with Swedish, been an official language in Finland.

The language has no articles, and the verbs have but two tenses, past and present. The future tense is expressed by circumlocution. There are 15 cases. The principal stress is always on the first syllable.

So-called long vowels are aa, ää, ee, ii, oo, uu, yy.

In the following diphthongs the sound of the individual letters must not be lost: uo, yō, ie, au, eu, iu, ou. āy, ōy, ai, ei, oi, ui, yi, āi, ōi.

Syllabication

A syllable consists of a vowel or diphthong with or without one or more consonants, as, a-pu, help; au-rin-ko, sun.

A consonant between two vowels belongs to the following syllable. Two consonants may be divided and double consonants, as kk, are always

divided.

In words having three consecutive consonants the last will go with the following syllable.

	1	nounced		4	will bou

¹ The orthographic signs, grave and circumflex, do not indicate the pronunciation of vowels. For example, d in la and d in parlames are similar.

² The dicressis shows that the vowel bearing it is divided in pronunciation from the preceding vowel,

as in Noël.

Un has no English equivalent; an nearly like the English taunt; ou like oo in food; in like an in sank; on like on in long; gn like ni in onion. Twenty-five letters of the Latin alphabet are used, the w being added only for

foreign words.

Punctuation is practically the same as in English.

Em dashes take a space before and after (—) not closed up as in English, and are also used to denote change of speaker in dialog.

Capitalization

Capitals are used the same as in English, except that proper adjectives, names of seasons, months, days of the week, titles, and the personal pronoun je (I) are not capitalized. In proper names of persons taken from the Italian the article is lowercased, as le Dante; otherwise use the form La Fayette. In names of places the article is lower-cased, as le Havre.

Use roman small caps for the centuries—example: xix° siècle.
Capitalize the following: Years of the Republican calendar (l'An IV), acts of plays (l'Acte V), volumes of books (Tome IX), titles of rulers (Louis XIV), and the numbered divisions of Paris (le XV° arrondissement).

Capitalize the first word and all proper nouns in the title of a book. If the title commences with Le, La, Les, Un, or Une, capitalize also the second word. Examples: Origines du culte chrétien; Les Origines du culte; La Reine Margot.

In vivid personifications the nouns personified are capitalized, as Ici habite la

Mort (Death abides here).

Historical events (la Révolution) also take the capital.

The equivalents of streets, etc., are lower-cased, as rue de la Nation, avenue de l'Opéra, route Saint-Denis, boulevard Saint-Laurent.

Observe the forms used in the following terms: l'Académie française; la Légion d'honneur; Louis le Grand; son Éminence; l'Église when referring to the church as an institution, and l'État when denoting the nation, as le Corps d'État, le Conseil d'État.

Accents

The orthographic accents used (acute, grave, and circumflex) must not be confused with the tonal accent that stresses certain syllables of words. In French there is no mark to indicate stress on any particular syllable.

Capital letters are likewise accented except where the protruding accent is likely to interfere with alinement, as in solid matter. Small caps carry all ac-

cents where indicated.

Hyphens

Geographic names containing the prepositions en, de, and sur are hyphenated, as Saint-Valéry-en-Caux. Hyphens are also used in spelled numbers under 100 with few exceptions. See list on page 57.

Spacing

No space is used after the apostrophe, as l'arbre, l'homme, d'autrement.

Syllabication

Division is made on a vowel or diphthong before a consonant, as jeu-nesse. The combinations bl, br, ch, cl, cr, dr, fl, fr, gl, gn, gr, gh, ph, pl, pr, th, tr, and vr must not be separated, as in re-pu-bli-que, de-peu-ple-ment, ce-le-brer, de-cret, au-tre-ment, ou-vrier, qua-drille, de-pe-cher, ca-tho-li-que, te-le-gra-phi-que, Vau-ghan, but where the g and n have separate sounds they are divided, as ag-nus, di-ag-nos-ti-que.

Any other two consonants are divided, as en-suite, im-mense, juil-let, ec-clé-

sias-ti-que.

As a rule, two vowels are not separated: mi-nuit; théâ-tre.

It is allowable to divide a monosyllable ending in mute e, as mar-che; hom-me. In dividing hyphenated phrases such as ira-t-il, and pré-sente-t-on the t must go over.

No division should be made on x or y, as in Alexan-dre, roya-liste.

One-letter divisions, as in a-près, are not permissible, nor should a word be divided on one letter in combination with an elision, as l'école, qu'avant, except in narrow measure.

The ligature α is inseparable.

Abbreviations

Article, tître, chapitre, scène, and figure are abbreviated only when they occur in parentheses.

In the following abbreviations superior letters are sometimes used

Figures

Numbers are usually spelled in text unless matter is of a statistical nature. Age and clock time will be spelled, as *huit ans* (eight years); six heures (six o'clock).

Dates and figures are spelled in legal documents, as l'an mil huit cent quatre

(the year one thousand eight hundred and four).

Cardinal numbers

un, une	one	soixante-dix	seventy
deux	two	soixante et onze	seventy-one

Fractions.—The numerator is expressed by a cardinal, the denominator by an ordinal as in English. Half= $moiti\acute{e}$ (noun) and demi (adjective); $\frac{1}{4}=un$ quart, $\frac{1}{4}=un$ tiers. Use la moiti\'{e} (not demi), where the half of is used in English.

Un huitième; les trois dixièmes=one eighth; the three tenths. La moitié de l'année=the half of the year. Une heure et demi=an hour and a half. Une demi-heure = half an hour. Les trois quarts de cette somme=three fourths of that sum.

1	í	ee in seen	u	u	u

The Gaelic is most commonly used in the western counties of Ireland, although, since a measure of independence has been achieved, the Irish Governalthough, since a measure of independence has been achieved, the Irish Government has made a determined effort to revive the language in all parts of the country. It belongs to the Celtic linguistic family, consisting of five living languages which are divided into two groups, the Gaelic and Cymric. To the first group belongs the Gaelic, the Highland Scotch and the Manx, while the Welsh and Breton (Brittany) belong to the Cymric or Welsh group.

The alphabet was evolved from the Latin and has changed very little since the eighth century. It consists of 18 characters, 5 vowels and 13 consonants; besides these there are a great many vowel combinations, which, however, generally have but a single sound. The most important are:

generally have but a single sound. The most important are:

$$\begin{array}{l} \begin{array}{l} \text{et} & = \check{e} \\ & \stackrel{\wedge}{\Delta 01} \\ = \ddot{a} \\ \text{ol} & = \ddot{o} \\ \text{ol} & = \ddot{o} \\ \end{array} \qquad \begin{array}{l} \begin{array}{l} \text{fo} \\ \dot{\Delta 01} \\ \text{ol} \\ = \ddot{o} \\ \end{array} \end{array} \right\} = e \; (\text{long}) \\ \begin{array}{l} \text{el} \\ \text{ol} \\ \text{el} \\ = \ddot{o} \\ \end{array} \qquad \begin{array}{l} \text{el} \\ \text{ol} \\ = \ddot{o} \\ \end{array} \qquad \begin{array}{l} \text{el} \\ \text{ol} \\ = \ddot{a} \\ \end{array} \right\} = \ddot{a} \; (\text{long}) \\ \begin{array}{l} \text{el} \\ \text{ol} \\ \text{el} \\ \text{el} \\ \end{array} \right\} = \ddot{a} \tilde{a} \\ \begin{array}{l} \text{el} \\ \text{ol} \\ \text{el} \\ \end{array} \right\} = \ddot{a} \tilde{a} \\ \begin{array}{l} \text{el} \\ \text{ol} \\ \end{array} \right\} = \ddot{a} \tilde{a} \\ \begin{array}{l} \text{el} \\ \text{ol} \\ \end{array} \right\} = \ddot{a} \tilde{a} \\ \end{array}$$

There are two accents, the acute and the dot. The former when placed on vowels indicates that they should be pronounced long. The dot is placed only on consonants and indicates they should be aspirated. The following are especially noticeable:

This is the language of the successors of the old Kolchian tribes on the south-west slopes of the Caucasus Mountains. It is the remnant of a once prolific language group, of which the Sumerian was the center, and consists of three dialects; the pure Georgic, in the eastern section, was the only one to become a literary language, of which remnants still exist that date back to the fifth century.

The Mchedruli alphabet shown above was generally used, except in ecclesiastical writings where the Chuzuri was employed, hardly a remnant of which exists today.

The text reads from left to right.

Syllabication is entirely phonetical, and punctuation is the same as in English. Stress is always on the first syllable, but not farther back than the antepenultimate.

There are no diphthongs and all words end in a vowel.

In ancient times the Chuzuri letters were also employed as numerals in religious manuscripts, but the Arabic figures are now used.

Continental sounds are employed in transliterating the alphabet.

GERMAN

The language has no accents; the diacritical marks used are \ddot{a} , \ddot{o} , \ddot{u} .

The Latin alphabet is coming into general use in German printing, and all 26 letters are used, with the addition of the ß or sz, which is used only in the lower case.

Where the em dash is used in text in parenthetical phrases, put a space on each side of the dash —, using a thick or thin space, according to the spacing of the rest of the line.

Capitalization

Initial capital letters are used as follows:

The first word of a sentence.

(b) In poetry, usually, the first word of each line.(c) The first word of a direct quotation; also the first word after a colon. exception to this rule occurs when the matter following is merely complementary to the preceding. For example, "At home he was seldom, to the Court he never came: if you would find him, you must needs seek him in the forest." Lower case after interrogation and exclamation points if the phrase following is directly connected, as in "Where do we go from here?" the man said; and "Give me liberty or give me death!" cried Patrick Henry. The first word of titles of books also has a capital initial.

All nouns are capitalized, although there is an ever-growing movement in

Germany to lower case common nouns.

Pronouns relating to the person addressed, as in letters, etc., as well as titles

of honor, are capitalized.

The custom of capitalizing proper nouns used as adjectives is quite variable. We have Schillersche Trauerspiel, Grimmsche Märchen, but also die lutherische Kirche and mohammedanische Pilger.

Any word used as a noun (for example, der Nächste, die Armen, das Rechte,

Gutes, Böses, etc.), takes a capital initial.

In solid matter, where the Umlaut (") on capital letters is likely to cause trouble in alinement, it will be omitted and a lower-case e added after the capital, as Ae, (Aerger), Oe (Oel), Ue (Ueber).

Hyphens

In words made up of two parts, where one part is common to both words, use the hyphen as follows: Feld-und Gartenfrüchte (field- and garden produce), the word früchte being common to both, and though a noun, is lower-cased; but use Haftpflicht-Versicherungsgesellschaft und -Versicherte (liability-insurance company and -insured), because the first is a compound word made up of two nouns.

Combinations of two or more words are printed without hyphens, Fluss

Wasser Stoff Säure becomes Flusswasserstoffsäure.

Syllabication

The following rules are based on the Prussian "Book of Rules":

I. Polysyllabic words are divided, as a rule, phonetically—i.e., as they naturally divide themselves when pronounced slowly and distinctly, as Wör-ter-ver-zeich-nis, Ge-schlech-ter, Ueber-lie-fe-rung. Syllables consisting of but one letter should not be divided.

Note 1.—Avoid the somewhat common division -ung in Lie-fer-ung,

Schreib-ung, which is contrary to the above rule.

Note 2.—(a) If there be but one consonant, carry it over, as tre-ten, $n\ddot{a}$ -hen; also (\dot{b}) , ch, sch, sz, ph, and th have but a single sound and are therefore indivisible, as $B\ddot{u}$ -cher, $H\ddot{a}$ -scher, Bu-sze, So-phie, ka-tho-lisch; x and zare considered simple consonants, He-xe, rei-zen.

Where there is more than one consonant, the last is carried over, as An-ker, Fin-ger, War-te, Rit-ter, Was-ser, Knos-pe, tap-fer, kämp-fen, Karp-fen, Ach-sel,

krat-zen, Städ-te, Ver-wand-te.
When using German text, d is changed to ft when division is necessary, as Haf=fe.

St is never divided, as ha-sten, be-ste, ko-sten, Klo-ster, mei-ste, Fen-ster, For-ster, Pfing-sten.

(1) These rules are inflexible, but the last does not apply in the case of äs-the-

tisch, since this is not a separation of st, but rather of s and th. (2) In simple non-German words the phonetic combinations of b, p, d, t, g, and k in connection with l and r are not separated, as Pu-bli-kum, Me-trum, Hy-drant.

(3) Retain also the phonetic combination gn, since, in most cases, it will be found phonetically correct, as Ba-gno, Ma-gno-lie, Ma-gnet, Si-gnet, etc. pag-nie is, however, an exception because here the g is really silent and the last

syllable begins with an n.

II. Compound words are separated into their physical parts and these are then treated as simple words, as Diens-tag, Tür-an-gel, Emp-fangs-an-zei-ger, Vor-aus-set-zung. This rule applies also in certain cases where it appears phonetically incorrect, as hier-auf, hin-aus, dar-über, war-um, wor-an, be-ob-ach-ten, Voll-en-den.

This is also the case in certain compound words of foreign origin, as at-mosphä-re, Mi-kro-skop, In-ter-es-se, but if the constituent parts of a foreign word are unknown, proceed as directed in (a) and (b) of Note 2.

Compound geographic names are no exception to this rule, as Frie-den-au.

Schwarz-ach, etc.

III. An old rule prohibiting the division of vowel combinations has been modified to permit division if the vowels do not dissolve, forming a diphthong. This rule also applies in the case of those foreign groups of vowels that cannot be separated into distinct separate sounds in pronunciation, as the French oi in coiffeur, oy in royalist, ay in rayon, ea in orgeade, as well as the English ea in Lear and ee and ea in beefsteak. It is also self-evident that in such words as Trauung and Kasteiung the separation of the final -ung is permissible.

Prefixes be and ge are also separable from words beginning with a vowel, as

be-ar-bei-ten, be-er-ben, ge-ar-tet, ge-eb-net.

Aside from these exceptions, vowels should not ordinarily be separated, although indicated in the following cases, when unavoidable due to narrow type measure:

(a) When the first vowel is stressed, as Hy-peri-on, Mu-se-um.
(b) When both are equal but pronounced separately, as lini-ie-ren, Sper-mato-zo-on, In-di-vi-du-um.

(c) When a short word cannot possibly be divided otherwise, as Oze-an.

(d) When each vowel retains its own sound, as Ela-in, Ka-per-na-um, kre-iren,

Zel-lu-lo-id.

Where the object of the second vowel is merely to lengthen the sound of the first, do not separate them, as Aachen, Moos.

Note 3.—In printing, a two-letter run-over is permissible only in very narrow measure.

IV. Where space is limited there are certain other permissible divisions that are entirely contrary to the foregoing rules. Glit-sch(e)st is a case of this kind; the word glitchst, having but one syllable, is indivisible, but by adding the e it may be divided: glit-schest.

V. If a compound noun is run over so that the second or third part of the compound begins the next line, the latter must not be capitalized. Do not use—Gepäck-

Annahme

but

Gepäckannahme.

With German text the round & is used in dividing only in those cases where it would have been used had the word not been divided—i.e., at the end of a prefix or component part of a compound word and in a few words of foreign derivation, as Blasphemie, Mollusfe, fonfiszieren, Ronfisfation, fosmetijá, Rosmogonie, Jedia, Esfimo, viszeral, Escorial, Escapade, Sansfrit, Susquehanna, disputieren; elsewhere the long j is used, as Drechster, Messer, etc.

Abbreviations

The following are some common abbreviations in German:

Note.—When using the above characters as numerals a period is placed before and after the character. In a medial position the jery has the sound of \vec{u} in the German word über.

According to Prof. S. Stanojevitch's Narodna Entsiklopedija, Glagolitsa takes its name quite possibly from the Croatian and Dalmatian priests who used it in their liturgical services about the 9th century and came from the Old Slavic word glagol, to speak; thus they called the priests glagolashi, speakers. There is ample evidence that it was employed especially for liturgical services wherever the Slavs lived. In fact there is evidence of its use in Russia, as shown by the Glagolithic inscriptions in the Novgorod Cathedral.

Aside from the south Slavic sections Glagolitsa has also been found on all monumental remains in Moravia and Bohemia, as also possibly in Macedonia. At the beginning of the 10th century it was used also in Bulgaria, but as the Cyrillic was being introduced it soon began to decline in common use and, by the 11th century, we find it confined mainly to Catholic liturgical use in northern Dalmatia, Croatia, and Istria, where it survived until about 1840. Its value now is merely historical, though it also possesses a great wealth of literature. Its origin is a problem that has engrossed theologians for many years. In 1890 Isaac Taylor advanced the thesis that Glagolisa originated from the Greek

hieratic script in the 9th century and that even before the time of SS. Cyril and Methodius the Slavs used Greek letters, combining them with characters Nos. 2 and 3 when it was desired to give a particular sound that was strange to the Greek language. He believed that to be the cause for its similarity to the Greek characters. Prof. Jagich, one of the greatest of Slavic philologists, has probably studied the subject more thoroughly than anyone else and concurs in this view, but further study convinced him that St. Cyril finally developed a style for the entire alphabet, which has a similarity to the Coptic.

The first book printed in Glagolitsa came from the press in Venice in 1483 and later was followed by a great mass of printed literature. When the division of eastern Europe into several political units took place the language lost caste, Austria, in particular, doing her utmost to discourage its use. It is interesting to know that in 1903 an Old Slavic academy was found on the beautiful Dalmatian island Krk which was engaged in the publication of books on Glago-

lithic literature, but all in Cyrillic transcription.

The Cyrillic alphabet, shown in the last column of the table, was originated in the year 863 by the Slavic priests Cyril and Methodius for use in the translation of religious books from the Greek into the Slavic language. With its 44 characters adapted from both the Greek and possibly an extinct Slav-runic alphabet, it became the alphabet of the Slavs who were within the fold of the Greek Orthodox Church. In the 18th century Peter the Great forced upon the Russians, among his many reforms, the modified Russian alphabet, and the use of the Cyrillic was relegated to religious books.

The Greek language uses 24 letters. Each letter has at least two forms, the majuscule, or upper-case, and the minuscule, or lower-case. The larger, or capital, letters are very like those used by the Greeks of the classical period; the smaller letters are derived from the cursive script used at a very much later period. The use given herewith is that taught generally in American schools and colleges.

Five of the lower-case letters have two forms each: α is used in text; α , as a symbol in mathematics; δ and ϑ are rare, never used as symbols; $\phi \varphi$, in text and

as symbols; σ, initial or medial; s, final.

Forms

The form σ is used at the beginning or in the middle of a word; the form s at the end of a word only. Various fonts of type, especially the older fonts, had variants for certain of the characters, notably for θ , β , and φ . These variant characters can generally be used indiscriminately and interchangeably.

The later manuscripts had many hundreds of ligatures, a remnant of the short-hand of the period. The earlier printers had a great many of these cast in type,

but they are not generally used today.

There is the relic of the primitive Greek alphabet remaining in the use of three ancient characters as numerals, f, digamma, or f, stigma, used for 6; f, koppa, used for 90, and f, sampi, used for 900. The only other occasion for the use

of these characters is in paleography.

Attention is called to the breathings, the rough (') which gives the sound of h to the letter on which it is written, and the smooth ('). Every initial vowel takes one or the other of these breathings. It is written over the second letter of a diphthong, and in front of capital letters. Initials v and ρ take the rough breathing above them, and doubled ρ was formerly written $\rho \rho$, but modern usage eliminates the breathings. The smooth breathing should not be confused with the apostrophe, which is used at the end of a word to indicate an omission.

Accents

Three accents are used in Greek, the acute ('), the tilde (circumflex) (") and the grave ('). These may be combined with the breathings to give a number of "sorts", the use of which involves a knowledge of the language.

GREEK DIACRITICAL MARKS

- ' lenis
 ' asper
- 'acute
- ' grave ...
 ' lenis acute
- * lenis grave
- asper acute
- * asper grave * tilde
- tilde lenis
- ₹ tilde asper
- " dieresis
- dieresis acute
- · dieresis grave

The Greek marks of punctuation are the comma (,), the colon-semicolon (·), the period (.), and the mark of interrogation (;). As the ancient Greeks wrote without any breaks, even between words, these marks are of quite recent origin, and are inserted where editors think they should go, generally as in English.

Pronunciation

Scholars think that the double consonants φ , χ , θ , ζ , ξ , and ψ , originally sounded both of their component parts, but that later they took on a single sound. The letter γ before κ , γ , χ , and ζ took the sound of n in ink. The letter ρ , when with a rough breathing, had a sound something like hr. The pronunciation of the principal diphthongs is:

at as ai in aisle av as ou in our ει as ei in rein ev as eu in feud or as of in toil ov as ou in you vi as ui in quit

The diphthong ηv can only be approximated by the sounds eh-oo pronounced quickly together.

The improper diphthongs a, η , ω , are pronounced like a, η , ω , respectively. There is a division of opinion among modern scholars as to the pronunciation of ancient Greek. Some think that the pronunciation of the modern Greek is more nearly like the ancient than the ordinarily accepted scholastic pronunciation.

Capitalization

As the ancient Greeks did not know the lower-case letters, they had no scheme of capitalization. The modern use is to capitalize proper names and the first word of a sentence. Poetry does not capitalize the first word of a line, unless under the above rule.

Syllabication

Each Greek word has as many syllables as it has vowels or diphthongs. The

following rules, based on ancient tradition, are used in divisions:

(a) Single consonants, combinations of consonants which can begin a word,

and mutes followed by μ or ν , are placed at the beginning of a syllable.

In Greek there are found to be 41 combinations of consonants that are used They are: to begin words.

 $\beta\delta$, $\beta\lambda$, $\beta\rho$, $\gamma\lambda$, $\gamma\nu$, $\gamma\rho$, $\delta\mu$, $\delta\nu$, $\delta\rho$, $\theta\lambda$, $\theta\nu$, $\theta\rho$, $\kappa\lambda$, $\kappa\mu$, $\kappa\nu$, $\kappa\rho$, $\kappa\tau$, $\mu\nu$, $\pi\lambda$, $\pi\nu$, $\pi\rho$, $\pi\tau$, $\sigma\beta$. $\sigma\theta$, $\sigma\kappa$, $\sigma\mu$, $\sigma\pi$, $\sigma\tau$, $\sigma\varphi$, $\sigma\chi$, $\tau\lambda$, $\tau\mu$, $\tau\rho$, $\varphi\theta$, $\varphi\lambda$, $\varphi\nu$, $\varphi\rho$, $\chi\theta$, $\chi\lambda$, $\chi\nu$, $\chi\rho$.

(b) Other combinations of consonants are divided.

(c) Compound words are divided into their original parts.

Cardinal numbers

a'	εls, μία, εν	one	v'	πεντήκοντα	fifty

λ'	τριάκοντα	thirty	, a	χίλιοι	thousand
μ'	τεττεράκοντα	forty	, ι	μύριοι	ten thousand

Ordinal numbers			
$\pi ho ilde{\omega} au$ os	first	ξνατος	\mathbf{ninth}
δεύτερος	second	δέκατος	tenth
τρίτος	third	èνδέκατος	eleventh
τέταρτος	${f fourth}$	δωδέκατος	${ m twelfth}$
πέμπτος	fifth	τρίτος καὶ δέκατος	thirteenth
ἕκτος	\mathbf{sixth}	εἰκοστός	twentieth
ἕβδομος	seventh	τριακοστός	thirtieth
őγδοος	eighth	χιλιοστός	thousandth

These numerals, except the cardinals from 5 to 100, are regularly declinable according to the rules of the language. The exceptions are not declinable.

The numeral characters take an acute accent after them, from 1 to 999. To place an accent below and to the left of a character multiplies it by 1000: e.g., $\alpha'=1$, $\alpha=1000$, $\alpha \ni \lambda \gamma'=1933$.

Chronology

The ancient Greeks divided time into periods of four years, called Olympiads, the first year of the first Olympiad beginning in the middle of the summer of 776 B.C. Each year was divided into twelve months, but there was no division into weeks.

The seasons were called $\tilde{\eta}\rho$, spring; $\theta \epsilon \rho \sigma s$, summer; $\delta \pi \omega \rho \sigma a$, autumn, and

χειμών, winter.

After the rise of the Roman supremacy the Julian calendar was adopted, with the Latin month names transliterated. After the advent of Christianity the weekly system was adopted, with names of the days as in modern Greek.

Wasstombian About July

Months

Εκατομραίων	necatomoton	About July
Μεταγειτνιών	Metagetnion	August
Βοηδρομιών	Boëdromion	September
Πυανοψιών	Pyanopsion	October
Μαιμακτηριών	Maimacterion	November
Ποσειδεών	Poseideon	December
Ποσειδεών δεύτερος	Second Poseideon	In leap years only (every eight years)
Γαμηλιών	Gamelion	January
'Ανθεστηριών	Anthesterion	February
'Ελαφηβολιών	Elaphebolion	March
Μουνιχιών	Mounichion	April
θαργηλιών	Thargelion	May
Σκιροφοριών	Scirophorion	June
	_	

The modern equivalents are, of course, only approximate, as the Greeks had not calculated the year as accurately as more modern mathematicians have. The first day of Hecatombion was intended to fall upon the summer solstice; but it actually varied from the middle of June to the first week in August

Ψ	ψ	Je of	psi	ps ps
Ω	ω	Ce w	omega	o in note

Modern Greek is very similar to classical Greek, being the direct descendant of that language. There are, at present, two slightly differing forms of modern Greek, the literary, or written form, and the popular or spoken, dialectal form. As practically all printed matter is in the literary form, the following rules concern that form; but certain popular pronunciations will be indicated as needed.

The modern alphabet is the same as that used for the older language. The pronunciation of some of the letters differs from that ordinarily used for the ancient Greek. It is given in the table.

Remarks

The character σ is used in initial and medial positions in a word, the character s in the final position. Variant forms of other letters have no fixed rule for use.

The combinations $\gamma\gamma$ and $\gamma\kappa$ are pronounced as ng in England, and nch in anchor. Before χ and ξ the γ has the sound of ng (nasal).

N-final before π -initial is pronounced as m, in which case the π is pronounced as b.

Diphthongs.—The "improper" diphthongs a and n are pronounced as a

and η , respectively.

The pronunciation of the diphthongs is as follows: At like ϵ ; $\epsilon \iota$, oi, $\nu \iota$ like η (ee); ov as ou in group. The diphthongs av, εν, ην are pronounced before all vowels and the consonants β , γ , δ , ξ , λ , μ , ν , ρ , as av, ev, eev, respectively, before θ , κ , ξ , π , σ , τ φ , ψ , as af, ef, eef, respectively.

The popular language introduces a number of palatalizations into its pronun-

ciation, notable among which is the prefixing of an ι (or a letter having an ι -sound, generally v) when the ι takes the consonantal sound of y.

Accents and breathings

Modern Greek employs the same accents and breathings as the ancient language, and under practically identical rules. Every word, with a few exceptions has an accent on one of the three last syllables. Every initial vowel carries a rough or a smooth breathing. The initial letters ρ and v always carry the rough breathing, and the combination $\dot{\rho}\dot{\rho}$ is usually written with a smooth and a rough accent. The rough breathing does not affect the pronunciation in any way.

Capitalization

Majuscules (capital letters) are used on title pages and in headings, much as in English, at the beginning of a sentence, on all proper nouns, on the titles of high-placed officials, and on the designations of corporations, associations, etc. In letters, etc., the pronoun of address is usually capitalized.

Punctuation

The comma, the period, and the exclamation point are the same as in English and are used similarly. The semicolon and the colon are represented by a point above the line. The question mark resembles the English semicolon. scheme for quotation marks is the same as in the western languages.

Syllabication

Modern Greek forms a syllable for each vowel or diphthong. A single consonant belongs to the following syllable. Two consonants divide, except that any two consonants that may begin a Greek word are given to the following syllable; further, three consonants will be affixed to the following syllable if the first with the second, or the second with the third can begin a word. Compounds may be divided on the compound.

A list of the letters which may begin a word can be found under Greek (classical), syllabication, page 70. This can be used in modern Greek.

Numerals.—Modern Greek uses the Arabic figures for ordinary number work. Where western languages use roman numerals, the modern Greek uses the same scheme of letters as used by classical Greek.

HAWAIIAN

A E I O U H	a e i o u h	a in father 1 e in obey 2 ee o in note oo in too 3 h, aspirated 4	K L M N P	k l m n p	k^{5} l , liquid m n , liquid p Between w and v
----------------------------	----------------------------	---	-----------------------	-----------------------	---

¹ Sometimes when it precedes k, l, m, n, and p it has the short sound of u in mutter, and in a few words it has the sound of aw or au. The true sound is between a in ask and the broad a in all.

² In an unaccented final syllable it has the sound of y.

³ When preceded by i it has the sound of u or yu.

⁴ Sometimes changed to l.

⁵ In Kauai it has the sound of t, but the best usage gives the Hawaiian consonants their unchangeable

Remarks

In pronouncing the digraphs ai, ao, au, ei, eu, or ou the stress is on the first letter.

Words taken from the English retain their Latin consonants: sabati, Sunday, not kapaki; buke, book, not puke; Baibala, Bible, not Paipala.

Accent

Bisyllabic words are generally accented on the first syllable, but when that is not the case the stressed syllable carries the accent mark: po-ho, chalk; po-hó, loss. In words of more than two syllables stress is usually on the penult; if not, the

stressed syllable carries the accent: ka-na-ka, a man; ká-na-ka, men. Reduplicated words follow the stress of their primitives: kúhikúhi, from kúhi; hólohólo, from hólo, the penult of the reduplicated word taking the primary stress.

The causative hoo prefixed to a verb does not change the stress, but receives a secondary stress: hooapono.

The sign of the passive i-a takes a secondary stress: huná, hunáía.

The final forms of the letters chaph, mem, nun, feh, and tsadi for the square, rabbinical, and cursive alphabets, respectively, are shown at their immediate right.

The Hebrew alphabet consists of 22 consonants, represented by 22 letters, which are also used as numerical signs. Hebrew is read from right to left.

The sound represented by the consonant κ (Aleph) is no longer known; ν (Ayin) is a guttural not generally pronounced and is usually transliterated by (').

The characters (a) Veth, (b) Chaph, (c) Feh, and (c) Thav are hardened with the introduction of a point into (c) Beth, (c) Caph, (d) Peh, and (d) Tav. The position of the point also determines the sound of (d) Shin and (d) Sin.

Similarity of certain letters

Vowel-signs or points

Besides the letters, which are all consonants, there are ten signs used as vowels. These are the Masoretic points, which, when placed above or below the consonants, indicate the vowel pronunciation. The majority of Hebrew works must be read without the aid of the vowel-points.

LÖNG V	OWELS	SHORT VOWELS			
₹ Kametz	a as in father	- Patach	a as in carry		
" Tzere	ei as in their	₹ Segol	e as in bed		
Chirik gadol	ie as in believe	 Chirik katon 	i as in big		
† Cholam	o as in no	 Kametz katon 	o as in of		
3 Shuruk	oo as in moon	: Kubbuts	u as in full		

The sh'va

Two dots placed vertically under a consonant (:) is called Sh'va, and indicates the absence of a vowel. When the Sh'va is united with the following consonant it is vocal, and has the phonetic value of the short e in believe, e.g., שמע (Shema).

When united with the preceding consonant it is silent, e.g., אברם (Ab-ram). Certain consonants which may not receive a Sh'va, combine the Sh'va with one

of the short vowels, e.g., אָמֶת, חֵלִי, אָנִי

The rule is not to divide Hebrew words.

N	n	n			

No corresponding sound in English.
 Really only lengthened form of preceding vowel.
 Except as final, it is merely a sign of the softening of the preceding consonant.

There are no exceptions to these rules of pronunciation. Punctuation is practically the same as in English.

Accent

Stress is without exception on the first syllable.

Capitalization

Forms of address in letters, etc., and titles are capitalized: Felséges Uram (Your Majesty); Méltóságod (Your Lordship).

Proper names and those referring to God are capitalized.

Adjectives formed from proper names are not capitalized: budapesti (of Budapest); magyar (Hungarian).

Syllabication

Simple words are divided at the end of a line so that where two vowels follow

one another they are separated: fi-am, mi-enk, ti-e-id.

Where two consonants follow one another, they also are separated: nap-pal,

 $er-d\ddot{o}$. Where a single consonant occurs between two vowels, it goes with the next syllable: vá-ros, va-dász. This rule also holds good where the consonant is a

double one: qy, cz, ly, ny, sz, ty, cs, zs (a-gyag, e-cset, e-czet, a-nya, a-tya, ro-zsa).

Two combinations of consonants occurring together in one word are abbreviated: ssz instead of szsz; but when they are divided, the original spelling is

restored: hosz-szu. Compound words are divided according to their construction: rend-or, meg-all.

Abbreviations

The following will be of interest because of their frequent use:

pengő, 100 filler szt. szent, Saint kir. királyi, royal pl. például, for instance t.i. tudniillik, that is stb. és a többi, et cetera f. é. folyó évi, current year fil. filler, half penny

		equivalent	Ö	ö	u in burn

The use of the letter \acute{e} , although retained by many writers, is questionable in modern Icelandic and the letter is now often replaced by je which has the same value. The letters y and \acute{y} denote mutation of original u and \acute{u} ; \ddot{x} is a mutation of \acute{a} and \acute{o} ; \ddot{o} a mutation of a. Z is by some grammarians considered an unnecessary letter and many writers entirely discard it. Diphthongs: au (composed of \ddot{o} followed by the sound of ee in seen), $e\acute{t}$ and ey (with the same sound, composed of the French \acute{e} followed by the sound of ee in seen).

Accent

The accent almost invariably falls on the first syllable.

Articles

There is only one article, the definite article. When used with an adjective employed as a noun, or with a noun further defined by an adjective or an ordinal number, it stands before the adjective, and is then declined as follows:

Singular			Plural			
	Masc.	Fem.	Neut.	Masc.	Fem.	Neut.
Nom.	hinn	hin	hið	hinir	hinar	hin
Acc.	hinn	hina	hið	hina	hinar	hin
Dat.	hinum	hinni	hinu	hinum \all	candare	
Gen.	hins	hinnar	hins	hinna san	genders	

If the noun is without any adjectival definition, or if the adjective follows it, the article is suffixed to it, in which case it drops the initial h, and if the word ends in a short or unaccented vowel, it drops the i also.

Syllabication

Division is made on the last consonant before a vowel: dag-ar, hrafn-ar, hepp-in, elok-að-i. Compound words are divided according to their component parts: vor-draum-ur.

L	1	l			

Syllabication

A single consonant between two vowels is always carried over; in case of two or more consonants, sound combinations must not be separated.

Combinations of two consonants are divisible if the first is a liquid; if one of the liquids, l, m, n, or r, is the first of the consonants, divide on these: Sar-co, compi-ti, quin-di-ci, par-la-re, dol-cez-ze. If the first consonant is not a liquid, the entire combination is carried over: Ri-spo-sta, de-sti-no, lu-stri, se-sto, que-sta.

Do not separate combinations representing a single sound, as ch, gh, gl, gn, sce, sci, scia, scio: Po-chi, lun-ghez-za, fi-glia, bi-so-gno, cre-sce-re, u-sci-re, la-scia-re.

Double consonants are divided: Quel-lo, af-flit-to, fac-cio, fug-gi-re, oc-chi-o, vec-chi-o, cac-cia.

Combinations of three consonants are divided on the first, except where the first is an s not belonging to a prefix: Sem-pre, men-tre, in-con-tro, com-pren-do, dis-gra-zia, but lu-stri, re-gi-stro, co-stret-to, me-schi-no.

Diphthongs, triphthongs, and sound combinations with i (semivowel) in ci, gi, gli, are not separated. Vowel combinations which are not diphthongs may be separated: e-go-is-mo.

Groups of two vowels with accent on the first are not separated: O-céa-no, géo-gra-fia, Béa-tri-ce. If the first is a, e, or o and the second carries the accent they are divided: Ma-é-stro, pa-u-ra, te-a-tro, cre-b, po-e-ta, so-a-ve. If the first is i or u, they may or may not be divided: Vi-sio-ne, gra-zio-so, but ri-ar-so, tri-on-fo, ru-i-na, flu-en-te.

While it is permissible, it is not well to divide so as to carry over a single vowel, as *orari-o*, and word groups with an apostrophe must not divide on the apostrophe, as *all'*, *coll'*, etc., but are divided on the first *l*, so that the second *l* and the apostrophe begin the next line, as *del-l'albero*; *un'ar-te*.

The space after the apostrophe is no longer required.

Capitalization

Capitalize all proper nouns, names of the Deity, the initial word of a sentence or a line of poetry, but lower case names of the months and proper nouns when used adjectively.

Capitalize adjectives when forming an integral part of a proper noun, as Alto Adige.

In book titles capitalize the first word and all proper nouns: Storia della diplomazia europea in Italia.

Accents

The grave is the only accent used and occurs on the final vowel of a word, indicating that the voice rests on that syllable; it also serves for the distinction of monosyllabic words.

The apostrophe indicates that a vowel has been left out, and may occur either at the beginning or end of a word, e.g., sopra'l letto, on the bed; l' opera, the

work, etc.

The affinities of the native Japanese language are not yet known. One school relates it to the Ural-Altaic group, while the other to Polynesian tongues. In its early stage, the Chinese ideographs were used for phonetic purposes as well as for their regular ones; but to simplify them, a syllabary, called iroha, consisting of 47 abbreviated characters, was selected to represent one Japanese sound each. Its cursive forms represented by several characters are called *hiragana*, and its plain forms represented with one sign for each, katakana. Modern Japanese writing is an intermixture of Chinese characters with kana.

The first column of the above table contains the English pronunciation; the second, the katakana, with the Chinese characters of which they are the abbreviated forms, and the remaining columns, the hiragana with their variants, arranged in the order of their most frequent occurrence.

ROMANIZED FORM OF JAPANESE PHONETIC SYSTEM

For the purpose of spelling out the language phonetically, the Japanese at an early date classified its sounds into a system of syllables. The following is patterned after the revised Hepburn system as used by A. Rose-Innes and T. Takenobu, with some further modifications:

Con	sonants						V	owels					
		a	e	i	0	ō	u	ū	ya	yo	уō	yu	уū
b		ba	be	bi	bo	bō	bu	bū	bya	byo	byō	byu	byū
ch		$_{ m cha}$		chi	$_{ m cho}$	$ch\bar{o}$	chu	$\operatorname{ch} ar{\mathbf{u}}$					_
d		da	de		do	${ m d}ar{{ m o}}$	_		_			_	
f		_	_	—		_	fu	fū	_	-			
g		$\mathbf{g}\mathbf{a}$	ge	gi	go	$g\bar{o}$	gu	${f g}{f ar u}$	gya	gyo	$gy\bar{o}$	gyu	gyū
h		ha	he	hi	ho	hō	_		$_{ m hya}$	hyo	$_{ m hyar{o}}$	hyu	$ m hyar{u}$
j		ja	_	ji	jo	jō	ju	jū		_	_	_	_
k		ka	ke	ki	ko	kō	ku	kū	kya	kyo	kyō	kyu	kyū
m		$\mathbf{m}\mathbf{a}$	me	mi	mo	${f mar o}$	mu	${f m}{f ar u}$	mya	myo	${ m myar{o}}$	myu	myū
n		na	ne	ni	no	$nar{o}$	nu	nū	nya	nyo	$ny\bar{o}$	nyu	$ m nyar{u}$
P		pa	pe	pi	po	$\mathbf{p}ar{\mathbf{o}}$	pu	рū	pya	pyo	$py\bar{o}$	pyu	$py\bar{\mathbf{u}}$
r		ra	re	ri	ro	rō	ru	rū	rya	ryo	$ry\bar{o}$	ryu	ryū
8		sa	se	- .	so	sō	su	$s\bar{\mathbf{u}}$			_		_
sh		sha	_	shi	sho	$sh\bar{o}$	shu	${ m sh}ar{{ m u}}$	_		_	_	_
t		ta	te		to	$t\bar{o}$	_				_		_
ts		_		_		_	$_{ m tsu}$	${ m ts}ar{ m u}$	_			_	_
W		wa			_			_		_			_

The sounds che, je, and she are possible, but are not used except in foreign

words and a few exclamations.

Any vowel may be followed by an n. This n, however, almost always should Any vower may be followed by an n. This n, nowever, almost always should be changed to m if the first letter following it is a b, m, or p. The sound tsu before a k, s, sh, t, ts, ch, h, or f, and the sounds ku and ki before a k are replaced by doubling the following consonant. sh, ts, and ch become ssh, ts, and tch. However, this doubling of the consonant is done only for reasons of euphony when the pronunciation of tsu preceded by a vowel and followed by a consonant would be difficult or harsh.

Romanization

There are two main styles of romanization. The first, which is widely accepted among the English-speaking people, is called the Hepburn style, named after its originator, James C. Hepburn. The second is called the Nihon style, based primarily on the structure of the Japanese language. The main points of difference in the two are the following:

> Hepburn: shi ji chi tsu ji zu si zi ti $_{\mathrm{tu}}$ di du

A committee appointed by the Japanese Department of Education is at present investigating the problem of romanization, and their report will decide which system is to be officially adopted.

The Romaji Hirome kwai, Romaji kwai, and others, have been recommending

the exclusive use of roman letters for the scholarly and scientific writings, but, on

the whole, they have not made much progress.

Accents

Accents in Japanese have but little importance for the student of either the spoken or the written language. Briefly the consonants should be pronounced as in English and the vowels as in Italian; the voice should maintain an even tone, no special emphasis being laid on any but long syllables.

For the native characters see the Chinese list of cardinal numbers.

Ordinal numbers

Cardinal forms are converted into ordinals by prefixing dai, as dai ni, the second.

Certain sets of characters are often used in place of numerals in numbering the volumes of a book, the prints in a set, and the like:

- 1,2: 上 jō, 下 ge; or 前 zen, 後 go.
- 1,2,3: 上 jō, 中 chū, 下 ge; or 前zen, 中 chū, 後 go; or 天 ten, 地 chi, 人 jin; or 雪 setsu, 月 getsu, 花 kwa (the order is sometimes getsu, setsu, kwa).
- 1, 2, 3, 4: 乾 ken, 坤 kon, 巽 son, 艮 gon; or 花 kwa, 鳥 chō, 風 fū, 月 getsu.
- 1, 2, 3, 4, 5: kwa, chō, fū, getsu, as above, and 雪 setsu.

Javanese is a language spoken in central and eastern Java by some 18,000,000 people. It is a branch of the Malay-Polynesian language family and a direct descendant of the old Javanese, or Kawi, language. It has adopted a considerable number of words from the Sanscrit without, however, making any change in its grammatical construction. The alphabet, also, is derived from the old Kawi, which, in turn, was evolved from a south Indian alphabet. The text reads from left to right.

The ligature character is sometimes used instead of the paten to give the con-

sonant the vowel sound.

Kanarese is the language spoken in Mysore, Hyderbad, and the adjoining districts of Madras and Bombay, and it belongs to the Dravidian language group. The irregular forms are similar to the Telugu, but it is closely related to the Tamil. The text reads from left to right and, as shown in the table, has many ligatures. Besides the vowels shown, there are vowel signs which are placed over or on the sides of the consonants; those for the g are as follows:

Consonantal doubling and combinations are also made by connecting two consonants or using a combination of parts of two consonants, as follows:

$$\vec{\gamma}_{0} = gga$$
, $\vec{Q}_{0} = rka$, etc.

The Korean child, in learning the sounds, recites them as shown in the table; i.e., as a syllabary—each consonant followed in turn by all the bee). 1 The form in the parentheses is the name of the letter (as b, in

³ We may say that a sound (3) is between two other sounds (1) and (2) when the organs of speech, moving from the position for (1) to that for (2), pass also through an intermediate position which, if paused at, would produce (3). This applies to both yowels and consonants. distinction, the name contains the consonant only once.

may be made for Examples: and final uses of the consonants, the name may use the consonant in both positions; but where there is no ¹ The form in parentheses is the Korean name of the letter. Since there is a distinction between initial

approximately lb or rb, etc. approximately lm or rm,

approximately lk or .rk,

S S 23

The Koreans have a true alphabet, not a syllabary, like that of the Japanese, nor a system of characters representing individual ideas, like that of the Chinese. It doubtless belongs to the Ural-Altaic language family and is at present spoken by some 17,000,000 people, the Chinese characters being used by the upper classes and in technical works. There are dialectic variations in different parts of the country, but these are unimportant. The alphabet, called Onmun, was introduced by the Emperor Setjong, with the assistance of some Chinese scholars, during the period embraced in the years 1443–46, and is particularly well adapted for writing the Korean. The characters, of which 14 are consonants and 11 vowels, are quite simple and bear some resemblance to the Sanscrit. although the historical evidence of their origin is lacking.

Korean spelling is very simple, because there are no silent letters and practically all the letters represent invariable sounds. It should be noted, however, that the letters of each syllable are not written in a line but are grouped into one sign, and the final consonant is always placed at the bottom of the sign. Like the Chinese, the text is generally written in columns, from top to bottom, the columns reading from right to left. In modern printing, however, the English style, in lines reading from left to right, has become quite common.

The character for s was formerly used after a letter that was to be doubled,

but that has now been discontinued and the character is repeated.

The language has neither punctuation, division of syllables, nor distinction as to capital or lower-case letters. If necessary, division may occur after any syllable.

The Chinese figure characters are in use generally.

The lunar month is used, the months being designated "first", "second", etc. In naming the days of the month, the numerals from 1 to 10 are used, and thus the 11th would be designated "second first", the 21st, "third first", etc.

LADINO

Ladino (Judaeo-Spanish) is a dialect composed of a mixture of Spanish and Hebrew elements. It is used as the vernacular as well as literary language by the Sephardim or "Spagnioli", descendants of the Jews expelled from Spain and now scattered throughout Turkey, Jugoslavia including Bosnia, Bulgaria, and Morocco. The so-called Rabbinical cursive characters are used in writing Ladino, but it is printed generally in Rabbinical, though sometimes in the square Hebrew characters (see p. 77), and also quite frequently in Latin letters.

It is most nearly like the Old Spanish, or Castilian, of the 15th century, containing about 80 percent of Spanish words, and is frequently called "idioma castellana" or "lengua vulgar." Students of Old Spanish should first familiarize themselves with Ladino. It resembles the Yiddish in that it includes many old Hebrew and Talmudic words, particularly such as have been transmitted from generation to generation or cannot be exactly translated into another language; e.g., chen, rachmonuth, zedackah. It differs from modern Spanish in that it contains many forms and words now obsolete which were still current in Castile toward the close of the 15th century when the Jews were expelled from Spain; e.g., fruchiguar, ermollecer, escuentar, muchiguar, podestania, pecilgo (=pellizco), espandir, etc.

One of the characteristics of Ladino is that it contains words taken from the Hebrew that have become Spaniolized; e.g., meldar, to read; meldador, the reader; melda, school; darsar (from the Hebrew root "רֹל"), to investigate, to instruct; chanufer (from אור), the flatterer, etc. Some of these words from the Hebrew have become current in the Iberian Peninsula; i.e., malshin=Spanish malsin, and Portuguese malsim, accuser, slanderer, and its derivatives malsinar and malsindad; the Rabbinical get became the Spanish guet, etc.

In Ladino, as also in the Old Spanish, f and g are each used instead of h; e.g., fijo instead of hijo; fablar instead of hablar; fambre instead of hambre; fermosa instead of hermosa; agora instead of ahora. The h, whether initial or median, is frequently omitted, as in ermano for hermano, and conortar for conhortar. Often m takes the place of n, as in muestros for nuestros, mos and muevo for nos and nuevo; m and n are sometimes inserted, as in amvisar for avisar, and munchos for muchos. Metastasis of d before r also takes place, as vedrad, vedre, acodro, and pedrer for verdad, verde, acordo, and perder; or of r before o, as probe for pobre, and proberia (still used in Galicia) for pobreria. The b is quite frequently used for v, as biuda, bolar, instead of viuda and volar. The Ladino has also absorbed a considerable number of Turkish words. One of its phonetic characteristics is the change of the Spanish ll to y; e.g., cabayero for caballero, and estreya for estrella. In printing with Hebrew square or Rabbinical characters this sound is represented by a lamed and double yod (ל"באר; e.g., ל"באר for llamar; ל"באר for llevar; "אלף for calle (street). For the letter q preceding e and i, P is used, as 'P for que; 'PK for aqui; 1"P for quien. The s is used instead of c and z, as in sielo and cabeson for cielo and cabezon; while , pronounced j, is used instead of you and gimel before e and i, as מוער for mujer, and איוו for hijo. The r is never doubled in Ladino.

The language has a comparatively rich literature, the origin of which dates back to the beginning of the 16th century, and this has in recent years been augmented by translations from the best in the literature of the leading countries of the world.

LATIN

ĀABCDĒĔFGHĪĪJ	ā ă b c d ē ĕ f gh ī ĭ	a in father a in Cuba b k in king d e in prey e in net f g in get h i in machine i in cigar	NŌŎ P Q R S TŪŬ V X	n ō ŏ p q r s t ū v x	n o in old o in obey p q r s in son t in time u in rule u in full w in we x

L	1	l	\mathbf{Z}	\mathbf{z}	z in zone (only in foreign
M	m	m			words)

I preceded by an accented a, e, or o, and followed by another vowel, becomes a semivowel, with the sound of y in yet.

U in qu, and generally in gu and su, has the sound of w.

The combination ch has nearly the pronunciation of the German ch. This, with certain other combinations, and the letters y and z were introduced in the second century B.C. for the purpose of transliterating Greek words.

The digraphs x and x are not to be considered separate letters, any more than the English f or f. The present tendency is away from the use of these

characters

The so-called "English" and "Continental" methods of pronunciation are no longer in use by scholars. There is an ecclesiastical pronunciation that approximates Italian.

Diphthongs

The pronunciation of diphthongs was to sound each vowel rapidly with the other: as ae=aye, oe=boy, au=our, ei=feint, ui=we, almost; eu can be represented by eh-oo.

Capitalization

Inasmuch as the Romans used only one form of letter, they had no rules for capitalization. Modern editors usually begin the first word of a sentence and proper names with capital letters, but not the first word of a line of poetry.

Accent

Words of two syllables are always accented on the first: men'-sa.

Words of more than two syllables are accented on the penult (next to last syllable) if that be long, otherwise on the ante-penult: $ho-n\bar{o}'-ris$, $c\bar{o}n'-su-lis$.

Syllabication

The number of syllables is governed by the number of vowels or diphthongs in the word: a-mi-ci-ti-am, se-ri-o, car-du-us.

When a single consonant occurs between two vowels or between a diphthong and a vowel, division is made before the consonant: Cae-sar, fre-num.

When two or more consonants occur together, division is usually before the last consonant: *inep-ti*, *nar-cis-sus*, *ves-ti-gia*.

Any combination of consonants that can begin a word belongs to the subsequent vowel; in other combinations the first consonant belongs to the preceding vowel.

There are found to be 28 combinations of consonants that are used to begin words and which are placed at the beginning of syllables in divisions.

as follows:

Bd, bl, br; ch, cl, cn, cr, ct; dr; fl, fr; gl, gn, gr; mn; ph, pl, pr, ps, pth; rh; sc, sm, sp, sq; th, tl, tm, tr. Ch, ph, and th may be treated as single consonants and keep l and r with them. Gu and qu should be kept together.

Compounds are separated into their component elements.

Calendar

The Romans numbered their years from the foundation of the city of Rome (a.u.c.), which corresponded with the year 753 B.C.

The first day of each month was called kalendæ (calends).

The seventh day of March, May, July, and October, and the fifth day of the other months were the *nonx* (nones).

The fifteenth day of March, May, July, and October, and the thirteenth day

of the other months were the idus (ides).

This is the scheme of the Julian Calendar, which was put into effect in 46 B.C. After the introduction of Christianity and the seven-day week Dominica dies was adopted in place of dies solis, and the other days were numbered ferix. For Friday the Greek term parasceve was sometimes employed, and for Saturday vigilium.

LATIN INCUNABULA

Special typographical characters and abbreviations most commonly used in 15th and 16th century books:

- ' (apostrophe) after any letter extending above the line stands for omitted letter or letters.
- ' (apostrophe) over letters not extending above the line for i or r with or without other letters.
 - \sim over letters for a with or without other letters.
 - o over letters for o with or without other letters.
- over one or more letters in a word are used for omissions in general (e. g. dni nri = domini nostri; coe scoup = commune sanctorum; oro = oratio; spek = impensis)
- p = com, con, cum, cun (e. g. pelli = compelli; percentage = contra; percentage = contrage; percentage = contrage
 - ⁹ above the line = us (e. g. fili⁹ = filius)
- 9 on the line at beginning of a word = con (e. g. 9iugio = conjugio)
 - $\iota = et$
 - ic = etcetera
 - p = per, par, por
 - $\bar{p} = pre$
- p, p = pro
 - $\dot{q} = qui (e. g. \dot{q} fq_3 = qui/que)$
 - q = qui, quae (e. g. qfq = qui/que)
 - $\varphi = que, quod$
- $\tilde{\varphi}, \tilde{q}_3 = quam, quan \ (e. \ g. \ \tilde{q}_3 tus = quantus)$
 - $q_3 = que$
 - z = r
 - $y = rum \ (e. \ g. \ \text{fin}^9 \ \text{fino} \ d\ddot{i} = servus \ servorum \ dei)$
- f = sis, also = sz or ss, also = ser (e. g. $\tilde{pef} = impenfis$; fmo = sermo)
 - pm = secundum
 - $\mathbf{B} = sed$

Ķ	ķ	ky	l		·

The following variations are also found in old Latvian prints: G g (g), K k (k), L l (l), N n (n), R r (r), and S f (s and s).

In 1921 the old German text was superseded by the Latin in Latvia. The language is purely phonetic and makes use of the diacriticals č, š, and ž to indicate the tch, sch, and tsch sounds, respectively.

Accents

The accents are as follows: ^ indicates a long vowel; - indicates that the syllable is to be pronounced clearly and not slurred, as devās; the apostrophe indicates the elision of a vowel. The new orthography customarily uses but one sign of prolongation, the

The stress is always on the first syllable, but the others are also pronounced distinctly, whether long or short; sometimes the unaccented long syllable has

a ^ or ', and thus receives a secondary accent.

In a few cases the second syllable has the accent, as labrīt (good morning). In words having the negative ne, the accent is on the first syllable of the stem word: neká (nothing), nekúr (nowhere).

Syllabication

Letters forming but a single sound must not be separated, nor will the h be separated from the preceding vowel.

Divide on a vowel followed by a consonant.

A single consonant goes with the vowel, two may be divided, but the consonant combinations dz and dž, must not be divided.

Maghreb is the name applied to the language in use at present in northern Africa, from the Egyptian border to Morocco, which may also include the Maltese, as well as the old Spanish Arabic. The various dialects show a strong Berber influence as well as some trace of the Romance languages, the Maltese being highly impregnated with Italian.

As shown in the table of the Moroccan alphabet, the Maghreb has developed from the Arabic alphabet a unique type face of its own, which is particularly noticeable in the $f\bar{e}$, $q\bar{a}f$, and ye. Eastward from Tunis it is displaced by the Arabic alphabet, while in Malta the Latin characters are employed.

The Arabic numerals are in general use.

 $^{^{\}rm 1}$ Characters alien to the Malay and found only in foreign, mainly Arabic, words. $^{\rm 2}$ Often n.

A distinct connection is apparent between most of the languages which prevail from Madagascar to Easter Island, in the Pacific, and from Formosa, on the China coast, to New Zealand, the most wide-spread in the history of rude languages. One of the most important of these languages is the Malay, which, however, has been strongly impregnated by alien languages, most important of which is the Arabic, the exact extent of which is rather difficult to determine.

which is the Arabic, the exact extent of which is rather difficult to determine.

There are also some 50 or 60 Persian words, mainly nouns and names of objects.

The few Portuguese words found in the language represent objects and ideas new to the Malays before their contact with Europeans.

Remarks

Where two vowels come together both must be sounded, but the first coalesces with the second: au, nearly ow in cow.

The consonants have the English sound, with the exception of the r, which is

sounded more clearly and with a more decided roll than in English.

The final k is not sounded, and thus the word ends with an n sound.

An apostrophe at the end of a syllable indicates an abrupt shortening of sound; between two vowels it indicates that they are pronounced separately.

Final h shortens the syllable.

The jazm (') indicates that the vowel over which it is placed closes the syllable.

Cardinal numbers

satu or sĕnam six one dua two tujoh seven tiga three dělapan eight four ĕmpat sĕmbilan nine lima five s-puloh ten

By adding bělas to the numerals from 1 to 9 those from 11 to 19 are formed:

s-bělas, 11; dua-bělas, 12, etc.

Multiples of 10 are formed by the addition of puloh: dua-puloh, 20; tiga-puloh,

Units are placed after the tens to form the intermediate numbers above 20:

dua-puloh-satu, 21; tiga-puloh-satu, 31, etc.

sa-ribu sa-ratus hundred thousand

Ordinal numbers

The ordinals are formed by adding to the cardinals the word yang, which corresponds to the English definite article, and prefixing ke to the cardinal: yang kědua, second, etc.; it should be noted, however, that yang pertama, first, is an exception to this rule.

Year

The Mohammedan year is lunar, consisting of approximately 354 days and 9 hours. The Arabic names for the months are used in the Malay.

Muharram ¹	first month	Rajab	seventh month
Safar	second month	Sh'aban	eighth month
Rabi'u 'l-awwal	third month	Ramadlan	ninth month
Rabi'u 'l-akhir	fourth month	Shawwal	tenth month
Jumadi 'l-awwal	fifth month	Dhu 'l-k'adah	eleventh month
Jumadi 'l-akhir	sixth month	Dhu 'l-hijjah	twelfth month

Week

Sunday first day Ithnain, Isnein, Snin Monday second day Thalatha, Salasa third day Tuesday Arba, Rabu Wednesday fourth day Khamis Thursday fifth day Jum'ah, Jum'at Friday the congregation 2 Sabatu sabbath Saturday

The colloquial names for the days of the week are Hari minggo, Hari satu, Hari dua, Hari tiga, Hari ampat, Hari lima, and Hari anam.

Manchu belongs to the Tungus group of languages and was doubtless in use by the Tungus people, in what is now called Manchuko, already in the 3d century B.C. It is an adaptation of the Mongolian and the text is arranged in columns, reading from the top down, the columns being arranged from left to right.

Books were already printed in Manchu in 1647, and soon the Chinese and Mongolian classics were translated and published, which fact accounts for the present-day interest in the language on the part of scholars, since these accurate translations have greatly facilitated the interpretation of those classics.

The vocalic harmony is not very strictly observed in the Manchu, and there are no alternative hard and soft forms in the case of grammatical suffixes (post-

positions), which are as follows:

Accusative, Genitive instrumental, i, ni Dative locative dechiAblative,

The verb does not distinguish either person or number, and the tenses are only imperfectly expressed, general notions being expressed by adverbial and participial forms.

There is no relative pronoun and participles are employed to express relative

prepositions.

Affixes are added to the verbal root to express some extended meaning; thus bu added to ara (to write), becomes arabu (to cause to write), and ja added to wa (to kill), becomes waja (to kill oneself).

The vowel a is changed to e to distinguish gender, or between strong and weak; thus ama (father), becomes eme (mother); even foreign words are treated in this manner as we find the Turkish arsalan (lion), changed to erselen for the female of the species, and the Sanscrit garudai (male phoenix) becomes gerudei (female phoenix). We also have ganggan (strong), changed to genggen (weak), and wasima (descend) becomes wesime (climb), etc.

MONGOLIAN

				1	1		1

				₹,	*		sh
				1	d		6w

1 Used only in first syllable.

² Used after a soft vowel. ³ Used after a hard vowel.

4 Used before vowels.
5 Used before consonants.
6 Used only in foreign words.

The Mongolian, dating back to the 14th century, belongs to the Altaic language group. The three principal dialects are the Khalkha, Kalmuk, and Buriatic, which differ only slightly. The alphabet is very imperfect, and, as a result, many words of widely different meaning are written alike.

The language is written vertically downwards, the columns running from left to right.

Future participles or infinitives are -qu, $k\ddot{u}$.

Various adjunctive forms and the gerund ending in -jü, -ged, -tele, -rün, etc., are used.

Negation is expressed by the adverbs ülü, ese, ügei, and the imperative buu,

while uu expresses the interrogation.

There are no prepositions, and sentences are joined by certain adjunctive and participial forms of the verb.

Following are the forms of the so-called "oi diphthongs" as used in the various positions:

Initial	Median	Final	Transliteration		
*	4	ろ	ai		
d	4	曳	oi		

Ligatures

Final	Median							
ba, be	A bi	bo, bu						
🎝 ke, ge	A ki, gi	$\diamondsuit \left\{ \begin{array}{c} k\ddot{o},k\ddot{u} \\ g\ddot{o},g\ddot{u} \end{array} \right.$						
A ng								

The word order is almost the reverse of the English. The nouns have six oblique cases:

With certain modifications this is also true of the pronouns:

bi I ta ye či thou ene this bide we tere that

The nominative case of a noun is usually indicated by inu, anu, or ber, and the plural by -ner, $-(\ddot{u})d$, s, etc.

Adjectives do not deflect for comparison and are often used substantively.

Adjectives do not deflect for comparison and are often used substantively. Person and number are not expressed by verbs, but these are conjugated for tense and mood:

¹ In older spelling b was often used for the sound p; now p is used.

² k and s are now usually substituted for c.

³ Many mute d's found in older spelling are now omitted; d was also formerly used in many words to express the sound t, where t is now used.

⁴ In former spelling g was used for k in many words, where k is now used.

⁴ The latter t is the specific product of t in many words, where t is now used.

⁵ The letter e is now often used for this sound, where x was formerly used.

6 Usually written ö and printed ø

⁷ The form aa was formerly used, but à is now preferred.

Norway has two official languages, "riksmål" and "landsmål".

The "riksmål" was in the past often called "Dano-Norwegian", because, under strong Danish influence, its written form was almost identical with Danish. The development has been in a distinctly nationalistic direction and there are now many differences between Norwegian "riksmål" and Danish, both in grammar, spelling, and vocabulary.

The "landsmål" is based upon the dialects, which have developed from the

Old Norse, free from Danish influence. Both languages are taught in the schools

and used in the government service.

The Latin alphabet is universally used in Norway, with addition of the letters x, ϕ or \ddot{o} and d or aa. E and ϕ are not diphthongs but separate letters, likewise a, although it may be written aa, is not a double a but the 29th letter in the alphabet, and usually found in that place in dictionaries. C, a, b, b, a and bare used only in foreign words and proper names. Even in words of foreign origin they are preferably avoided by substituting k or s for c, kv for q, v for w, ks for x, and s for z.

Capitalization

Capital letters are used only at the beginning of a sentence, or after a full stop, after colon and quotation marks, in proper names and in the personal pronouns De, Dem and Deres. Proper names used as adjectives and the names of months and the days of the week are not capitalized.

Syllabication

Where one consonant stands between vowels, divide before the consonant. Of one or more consonants, the last only is carried over. Compound words are divided so that the component parts remain intact, regardless of the consonant rule.

Punctuation

English rules for punctuation will apply.

The Ossettes are an Indo-Germanic people descended from the ancient Massagetae and Alani which were a branch of the Ostrogoths, portions of which moved on into northern Africa. They live mainly in the middle Caucasus, and there are two principal dialects, the Iron and the Digor. The similarity of some of the words indicates a possible connection with the Hungarian.

The language was first reduced to writing toward the close of the 18th century, when the Russian alphabet was used with the addition of several characters to represent sounds foreign to the Russian. At the present time the Latin text is employed; and while some newspapers and books have been printed literacy is

employed; and while some newspapers and books have been printed, literacy is

very low among the people.

Syllabication and punctuation are like the German.

 $^{^2}$ It has exactly the same sound as the initial alef. 3 Vav preceded by zammeh (expressed or understood) sounds like the Italian u; when preceded by fatch and not followed by another vowel the two form a diphthong au pronounced as the English long au.

Note.—The characters Ain and Ghain appear to be hard gutturals; Ghain is always g, but from a grammatical standpoint Ain cannot be well defined in any of the three Near Eastern languages. While at best it has only a very short sound, it cannot be omitted from the alphabet because of the effect it has on the

proper pronunciation of the words.

It is also considered a vowel, especially at the beginning of words, taking the place of a, \bar{a} , i, \bar{i} , u, u. In a median position it generally takes the place of i or ii, depending mainly on the proper relation of the words and its nearest transcription and pronunciation into the Latin alphabet.

Ligatures

But one example is given of the characters that differ only in the diacritical sign

Punctuation is practically the same as in English.

The Polish has six words consisting of but one letter each: w, in; z, with; i, and, also; a, and; o, about; u, by.

Stress is invariably on the next to the last syllable.

Syllabication

1. Divide on a vowel followed by a single consonant (ch, cz, dz, dź, dź, rz, sz, and szcz being treated as single consonants, cannot be divided), as chło-pak, cho-dak. Vowels are a, q, e, e, i, o, o, u, and y (q, e, and o not properly accentual).

2. Divide on the first of two or more consonants (szcz, zd, and zg are not separately).

able), as an-te-nat, jutrz-nia.

3. The following vowel and consonant combinations are inseparable: bi, fi, gi, gie, ki, kie, mi, ni, pi, and wi.

	11			

Remarks

Nouns and adjectives ending with an m in the singular change their ending to ns in the plural, as homem (homens), bem (bens).

Pronouns appended to verbs are preceded by a hyphen as praz-me, louvando-

nos, dar-lhe-hei.

Do not put a space after the apostrophe, as in d'aquelle, n'estas.

The sign \$ is used as follows in Brazil: 234:583\$120, meaning 234 contos, 583 milreis, and 120 reis.

Punctuation marks are used in the same manner as in English.

Capitalization

Capital letters are used for proper names, titles of books, plays, etc., and the first word of a sentence.

Adjectives derived from proper nouns are lower-cased.

Syllabication

Divide on a vowel, as e-di-fi-cio.

Divide on the first of two consonants, except lh (fi-lho), nh (se-nho-ra), bl, br, ch, cl, cr, ct, dr, fl, fr, gl, gn, gr, ph, pl, pr, pt, st, th, tr. But if a consonant precedes st, the s remains with the first consonant, as in de-mons-tra-ção, cons-ti-tui-ção.

Certain prepositions (inter, post, etc.) before vowels should remain intact: inter-cambio, post-operatorio, but in-te-resse.

The combination of two vowels should not be divided, such as ao, au, eu, ia, io, iu, ou, ui, uo, uu, etc.

The nasal diphthongs are distinguished by the tilde (~) placed over the first vowel, and must not be divided, as ãe, ãi, ão, õe. Do not divide the triphthongs eia, éia, eão, ião, oei.

REFORMED PORTUGUESE ORTHOGRAPHY

On September 1, 1911, the commission appointed on February 15 of the same year for the purpose of revising the national language, made its report to the Minister of the Interior. The commission recommended the adoption, with very slight changes, of "Ortografias Portuguesas," a volume containing 183 pages, which had been published by the Academy of Sciences of Lisbon in 1902, and further that it be adopted for all governmental publications and insti-

tutions of learning.
On June 15, 1931, the Provisional Government of the Republic of Brazil, the largest and most important Portuguese-speaking country in the world, issued a decree making extensive and somewhat radical changes in the orthography of the language "for the purpose of securing uniformity in the national language." The new orthography had been adopted previously by the Brazilian Academy of Letters, and the decree directs that it be used in all public departments, educational institutions, the Official Journal, and in all other official publications. A decree dated August 3, 1033, provided that after January 1, 1035, only those decree dated August 3, 1933, provided that after January 1, 1935, only those textbooks conforming to the decree of June 5, 1931, will be used in the public schools. However, its official use has since been abandoned.

The following is a free translation of the essential portions of the decree:

MUTE CONSONANTS

Do not use any consonant that is not sounded:

autor not auctor aluno not alumno sinal not signal salmo not psalmo adesão not adhesão

but do not change the words-

egipcio espectador recepção acne caracteres egipciaco espectativa egiptologo gnomo optar mnemonica

or any other words in which the letters bd, cn, gn, pç, ct, pt, pc, or mn are sounded separately and distinctly.

Double letters.—Do not double consonants:

sabado not sabbado belo not bello acusar not accusar chama not chamma adido not addido pano not panno efeito not effeito aparecer not apparecer sugerir not suggerir atitude not attitude

Exceptions.—(a) The letters r and s are doubled for emphasis:

russo, etc. barro passo carro cassa

(b) The c is doubled or used with the c when each is sounded separately:

infeccionar sucção, etc. secção seccionar infecção infeccioso seccional

(c) The letters r and s are doubled in words having a prefix ending in a vowel:

arrasar assegurar prorrogar prorromper prerrogativa pressentir (from raso) (from seguro)

THE LETTER H

Retain the initial, median, and final h, (a) when it conforms to the etymology of the word:

homem hora honorario, etc. hoje

(b) In words naving a prefix and a complete Portuguese word:

deshumano inhumano rehaver, etc. deshabitar deshonra

(c) When used in combination as ch, lh, or nh to form arbitrary sounds:

lenho manha, etc. chave malha chapéu velho

(d) In interjections: oh! ah!

Drop the h, (a) when it occurs in the middle of a word, except as above noted:

sair not sahir

cair not cahir

compreender not comprehender coorte not cohorte

exumar *not* exhumar proibir *not* prohibir

(b) In future and conditional pronominal forms of verbs:

dever-se-á not dever-se-há escrever-se-á not escrever-se-há dir-se-ia not dir-se-hia, etc.

Where it occurs at the end of a word:

Jeova not Jehovah

raja not rajah

CHANGES FROM INITIAL SC

The initial s has been dropped in words like-

ciencia cetro cena cetico cisão centelha

cintilar ciatico

also when used with a prefix:

precientifico

preciencia, etc.

USE OF THE APOSTROPHE

Drop the apostrophe, (a) in the contraction of the preposition de with the personal pronoun of the third person:

dêle

dela

dêles

delas

with the demonstrative pronouns:

disto

disso

daquilo

with the article:

do da dos

dum duns dumas

with the demonstrative adjectives:

dêsse dêste dessa desta daquela dêsses dêstes daqueles dessas destas daquelas

daquele with the adverbs:

aí as in daí aqui as in daqui ali as in dali antes as in dantes onde as in donde aquem as in daquem alèm as in dalèm

with the preposition:

entre as in dentre

(b) Drop it in the combinations em, with the pronoun in the third person: nele, etc., and with the demonstrative pronoun: neste, etc.

(c) In forms composed of the demonstrative adjectives:

essoutro

destoutro

aqueloutro

outrora

nestoutro

THE LETTERS K, W, AND Y

These letters are not used in the Portuguese nor in translated words, but are replaced: (a) the k by qu before e and i:

querosene quiosque oliun

quilômetro

faquir

and by c in every other case:

calendar cágado caleidoscopio

cleptomania

cleptofobia

Note.—Retain the k in abbreviations of quilogramo, quilogramo, quilolitro, and quilometro, as k, kg, kl, km. Although it does not belong to the Portuguese alphabet, the k is used in foreign proper names and foreign words which have been adopted into the language. Limit its use to—

kantismo kantista kaiser kaiserista kappa (Greek) Kepler kepleria kepleriana kermesse Kiel Kiew kummel

(b) The w is replaced by u or v, according to its pronunciation:

vigandias vagão valsa Osvaldo

Note.—Retain the w as a symbol for oeste (west).

(c) The y is replaced by i:

juri mártir tupí Andaraí

THE COMBINATIONS CH (HARD), PH, RH, AND TH

(a) Substitute qu for ch (hard) before e and i:

traquéa not trachéa querubim not cherubim quimera not chimera quimica not chimica

Elsewhere it is replaced by c:

caldeu not chaldeu cromo not chromo
caos not chaos Cristo not Christo
corografia not chorographia cloro not chloro
catecumeno not catechumeno

(b) The digraphs ph, rh, and th are replaced by f, r, and t, respectively:

filosofia *not* philosophia fosforo *not* phosphoro retorica *not* rhetorica reumatismo not rheumatismo tesouro not thesouro ortografia not orthographia

THE COMBINATION MP

Substitute n for m in the words which etymologically carry the p:

pronto *not* prompto assunto *not* assumpto

isento not isempto

USE OF THE LETTER S

Use the final s and not z, (a) in the pronouns nós and vós;

(b) In the second person singular of the future indicative:

amarás ofenderás irás porás

(c) In the second person singular of the present indicative of the monosyllabic verbs and their compounds:

dás vês revês ris desdás crês descrês sorris

(d) In the plural of words ending in a long vowel:

pás frenesís teirós perús cafés

(e) In foreign adjectives and other words formed with the suffix ês (Latin, ense):

inglês turquês cortês aragonês iroquês pedrês barcelonês veronês berlinês javanês marquês baionês borgonhês português burguês garcês finês siamês camponês tamarês francês sudanês montanhês tavanês, etc. holandês turquianês montês

(f) In Latin words in common use which maintain their original form:

bis plus virus pus (substantive) jus (g) In the monosyllables and the following stressed words:

carajás freguês piós princês ananás catrapús gilvás após convés grós rês arnês cós linaloés res arrás cris luís (money) resvés daruês arriós macis tornês ás dês (since, from) mês trás obús atrás detrás tris através pardês enapupês viés calcês enxós paspalhós zás-trás, etc. camoês filhós pavês

USE OF THE MEDIAN S

(a) In the feminine forms (substantive) which take the ending esa or isa:

baronesa consulesa sacerdotisa diaconisa duquesa prioresa poetisa profetisa princesa

(b) In adjectives formed from the substantives with the augmentative suffix oso:

animoso formoso populoso teimoso doloroso

(c) In the different tenses of the verbs querer and pôr, with their components:

quisquisemospuseramcompôsquisestespuspusemosdispusestesquiserampusestescompús

(d) In the words ending in esa or eso, which are not truly Portuguese, in harmony with the language of their origin, also their derivatives in conformity with them:

empresa surpresa represa defeso despesa framboesa poesa obeso defesa presa aceso teso mesa devesa ileso

(e) In the verbs of Latin origin ending in sar:

acusar (acusare) recusar (recusare) refusar (refusare)

(f) In the substantives, adjectives, and the participles terminating in (or consisting of) aso asa, iso, isa, oso, osa, uso, usa:

paraiso divisa caso 1150 esposo aso siso abuso guiso liso luso vaso glosa fuso asa rosa casa friso raposa escuso narciso infuso brasa grosa viso brisa entrosa concluso conciso contuso frisa. tosa aviso camisa prosa musa graniso

(g) In the prefix trans, as well as the forms tras and tres, and also their derivatives:

transação transandino transoceanico traseiro transiguir transição trasante-hontem trasordinario tresandar

(h) In the nouns ending in ase, ese, ise, and ose:

crase fase génese apófise frase perípase diurése bacilóse acroase diátese síntese diagnóse apófase

(i) In composite words derived from the Greek with isos:

(i) in composite we	oras acrivea from	one creek wit	11 1000.			
khrysos	stasis	crisóstomo	quersoneso			
lysis	thesis	crisántemo	fisiologia			
mesos	isocolo	analise	ptoseonomia			
nesos	isodico	mesartérite	êxtase			
physis	isodinamico	mesaulio	sintese			
ptosis	crisóptero					
(j) In verbs terminating in <i>isar</i> whose roots terminate in s formed with the suffix ar:						
avisar	precisar	analisar	irisar			
(avis ar)	(precis ar)	(analis ar				
, ,		F THE Z				
Use final z in stress	ed words ending i	n az, ez, iz, oz	, or <i>uz</i> :			
assaz xadrez	perdiz	veloz	arcabuz			
Note.—See excepti	ons given in the r	ules governing	the use of the letter s.			
are and	B1 (011 111 0110 1	area 80 / erming				
/		E MEDIAN Z				
(a) Use z in words	of Latin origin in	which the z di	splaces the c , ci , or ti :			
azêdo (acetum) fiuza (fiducia) juizo (judicium)	vizinho (razão (ra prazo (pl	tionem)	prezar (pretiare) mezinha (medicina)			
(b) In verbs ending	in zer or zir and	their compone	nts:			
		-				
aprezer dizer	jazer cozer	conduzir induzir	luzir produzir			
fazer	(to cook)	muzn	produzii			
Note.—Spell coser descoser, recoser, etc.	(with s) when it	means to sew,	and also in the variations			
(c) In the terminat	ions (z)inho and (z) ito of the dir	ninutives:			
	, ,					
florzinha maezinha	paizinho	avezita	pobrezito			
(d) In words of Ara have been adopted in	abic, oriental, and to the language:	Italian origin :	and their derivatives which			
azáfama	azar	gazúa	bizantino			
azeite	azeviche	vizir	bizarro			
azul	bazar	bezante	gazeta			
azouge	ogeriza					
(e) In verbs ending	· ·					
autorizar	batizar	civilizar	colonizar			
(f) In substantives	formed from the		the suffix eza (Latin itia):			
beleza fereza	firmeza madureza	moleza	pobreza			
(g) In words derive	ed from those endi	ng in z:				
apaziguar	cruzado	dezena	felizardo			
avezar			renzardo			
PROPER NOUNS						
Portuguese or tran written with the final	z when terminating	ouns, whether ng in a long sy	personal or locative, are llable:			
Quieroz Garcez	Luiz Queluz	Tomaz	Andaluz			
When the last syllable		inal s:				
		Fernandes	Nunes			
Alvares Peres	Dias Pires	rernandes	Nunes			
Note.—The name Jesus and Paris retain the s.						

Retain the corresponding vernacular forms of spelling already in use in the case of foreign proper names:

Antuerpia Colonia Londres

Berna Escandinavia Marselha

Bordéus Escalda Viena

Cherburgo Florença Algeria

Note.—Wherever such exist, vernacular names for those in foreign languages are to be preferred. Retain, however, the original forms of those that are not adapted to the Portuguese language:

Anatole France Carducci

Byron Musset Conte Rosso Shakespeare

Carlyle Southampton

DUAL FORMS OF SPELLING

Where two forms have been in use, adopt the following (also in their derivatives and compounds):

(a) Brasil not Brazil

(b) idade not edade (c) assucar not açucar igreja not egreja alvissaras not alviçaras dossel not docel

criar (to raise)

sossegar not socegar jovem not joven crear (to create) solene not solemne

igual not egual

rossio not rocio almaço not almasso (d) ansia not ancia dansar not dançar

pessego not pecego

maciço not massiço ascensão not ascenção farsa not farça

cansar not cancar pretensão not pretenção

ENDINGS IN Ã, ÃO, AM

Use \tilde{a} and not an in words where the last syllable is stressed:

amanhã

maçã

talismã, etc.

in the feminine of words ending in \(\tilde{a}\)o in the masculine—

cristã

irmã, etc.

and the monosyllables-

lã.

vã

Use $\tilde{a}o$, and not am, in the case of monosyllables:

chão

vão

in the stressed words-

coração

verão

alcorão

in the future form of the verbs-

amarão

deverão

farão

and in other words which are now written either \(\tilde{a} o \) or am—

acórdão sótão

bénção

órgão

órfão

Note.—The tonic syllable of words ending in ão must carry an acute accent as shown in the case of the five examples given above.

Use am in the unstressed terminations of the verbs:

amam

amavam

amaram

disseram

fizeram expuseram

DIPHTHONGS

The diphthongs ae and ao will be written with i and u:

pai grau

cai mau

sai pau amais, etc.

The diphthong eo is replaced by éu or eu:

céu chapéu

véu meu teu, etc.

The diphthong iu replaces io:

feriu partiu viu

The diphthong oi replaces oe:

anzois doi heroi, etc.

Note.—When these vowels do not form a diphthong, no change is made:

aérides aéreo cáos **caótico** teologia rio tio oeste oeta

Write ao and not au when it is a combination of the preposition a with the article o.

Retain the diphthongs ae, oe, and ue:

mãe anões dispões pões

tabeliães azues

USE OF THE LETTER G

Retain the median g in the following, also in their components and derivatives:

imagem eleger legitimo fugir

pagem

THE PRONOUN LO

Retain the forms lo, la, los, las: (a) with the infinitives of the verbs:

amá-lo ofendê-la possuí-los repô-las

(b) With the verbal forms ending in s: ama-lo, etc.

and also when they end in z-

di-lo fá-los

(c) With the pronouns nos, vos, and the form eis:

vo-lo no-la ei-lo

Note.—These pronouns are connected by a hyphen and the tonic vowel of the verb is accented.

THE LETTER X

In words taking x, s, cs, ss, ch, their prosodic values (s, z, cs, ss, and ch) are retained:

excelente exato fixe proximo

luxo

SYLLABICATION

Divide words phonetically according to the spelling, and do not separate them into the elements of derivation, composition, or formation:

subs-cre-ver sec-ção de-sar-mar in-ha-bil bi-sa-vô e-xer-ci-to ex-ce-der cons-ti-tui-cão

In order to do this readily, observe the following rules:

(a) Separate double letters:

ar-ras-trar pas-sa-gem suc-ção

(b) The s of the prefixes des, dis remains with the first syllable when followed by a consonant:

des-di-zer dis-con-ti-nu-ar

If followed by a vowel, it is carried over to the next syllable:

de-sen-ga-nar de-sen-vol-ver de-si-lu-são

(c) Where two consonants are pronounced separately, the first is retained with the preceding syllable:

con-tac-to re-cep-ção es-pec-ta-ti-va

(d) Do not separate diphthongs:

i-gual (i-guais)

nai-pe

rei-na-do

au-to

(e) Separate vowels of equal force:

co-or-de-na-da

as well as consecutive vowels that do not form a diphthong-

vo-ar

po-ei-ra

pro-e-mio

me-ú-do

ci-ú-me

THE HYPHEN

Separate compound words whose different elements retain their phonetic independence with a hyphen:

para-raios

guarda-pó

contra-almirante

Note.—Do not use a hyphen between the elements in the made-up words:

parapeito

malmequer

malferido

ACCENTUATION IN REFORMED PORTUGUESE

Use the acute accent on bisyllabic or polysyllabic words where the stress is on the last syllable, and which terminate in i or u, whether or not followed by s:

perú(s)

tupí(s) urubú(s) colibrí(s)

RULES GOVERNING THE USE OF WRITTEN ACCENTS

1. Differentiate between stressed and unstressed words and distinguish the predominant syllable where there are more than one.

2. Distinguish words that are spelled the same, but differ in either pronunciation or meaning and grammatical function.

There are monosyllabic, bisyllabic, and polysyllabic words:

pá

parada

There are monosyllabic and bisyllabic stressed words:

dá

pára

as well as unstressed words:

da.

para

In bisyllabic words the first syllable usually receives the stress: mares, but if the second, that carries the accent mark: marés.

In polysyllabic words when the stress is on the last syllable the accent mark is used: falará; when on the penultimate, the mark is omitted: falara, but when

on the antepenultimate, it is used: faláramos.

Words in which the last syllable is predominant are called "acutes" or "ultimates." If the next to the last syllable is predominant, they are called "grave", "perfect", or "penultimate." If the predominant syllable is that next to the penultimate, it is called "antepenultimate" or "prepenultimate."

No Postume and coming the stress on a syllable preceding the antepenulti-

No Portuguese word carries the stress on a syllable preceding the antepenultimate syllable, except in cases of pronouns connected by hyphens, where the stress will remain as in the original verbal form, regardless of how many syllables there

are: dávamos-to, dávamo-vo-lo.

Where a written accent is necessary, use an acute on the stressed vowel in i and u and in the case of a, e, o, when open:

fará

difícil

útil

portaló

Use the circumflex on a, e, and o, closed:

ânsia

indulgência

avô brônzeo

but-

fímbria

núncio

67289°-35-10

órgão

sdzinho

with the preceding vowel: saïmento

The grave accent serves to designate, wherever convenient or necessary to the correct pronunciation of a word, the value of the vowels a, e, and o, regardless of whether or not they are stressed, but especially where they are not:

The dieresis over unstressed i or u indicates that it does not form a diphthong

pègada fàcilmente

saüdar

capitães

mòlhada

The tilde serves to indicate the stress in words not otherwise indicated: maçã

órfấ

But if the	wowel should b	e stressed, us	e the acute—	-	
saída		saúde			
Use the di qu where the	eresis also on u is to be sou	the u , if follounded—	wed by e or	i, in combination	ons of gu and

	único multíplice(s) Also the verbal	núncio múltiple	o(s)	cadáveres quádruplo(s)		árvore(s)	
	louvávamos devêramos	louvára: devería:	mos	louvaríamos puníamos		devíamos puníramos	
	puniríamos saíssemos	louvásse fi zé ss e m		devêssemos		puníssemos	

¹ Cf., reis, bateis.
2 Cf., verb sois.
3 Cf., por, a preposition.
4 Cf., para, a preposition.
5 Cf., pelo, pela, prepositions for the articles lo, la.
6 Cf., polo, preposition for the article lo.

(i) Use the circumflex on the e and o when stress is on the penult, ending in a(s), e(s), or o(s), closed, as well as in those having the same spelling where the vowels are open:

Substantives Verbs rêgo rôgo rego rogo Present Preterit dêmos demos Closed_____ côrte côr mêdo Open____sede corte cor medo

(j) Use the acute accent on stressed i, e, o, and u where they do not form a diphthong with the preceding vowel:

país saída faísca Taígeto saúde balaústre baú

(k) Do not use the accent before nh, nd, and mb, nor before any consonant, except s, which does not begin a syllable:

bainha ainda Coimbra juiz ruim paul cair sair

but

juízes caíres saíres

(l) Where o, i, or u do not form a diphthong with the preceding vowel and are unstressed use the dieresis instead of the acute:

saïmento païsagem saüdar abaülado

(m) The dieresis is also used in the combinations gu and qu, where the u is to be sounded:

consequência aguentar arguir

But if the u is the predominant vowel, use the acute: apazigúe

(n) Use the grave accent to indicate that the unstressed a, e, or o are open:

àquele(s) àquela(s) àparte (substantive) aquele(s) aquela(s) aparte (verb)

Also in homographs where a vowel is mute:

prègar pregar (de prego) molhàda (de molhada (de molhar) molho)

- (o) To avoid mistakes in reading, the acute accent is replaced by the grave as follows:
 - 1. In derivatives, whether augmentatives or diminutives, formed with the letter z:

má, màzinha, màzona avó, avòzinha órfã, òrfãzinha anéis, anèizinhos

2. In those adverbs ending in *mente* in whose primary form the vowel carries the acute accent:

rápido, ràpidamente benéfico, benèficamente exótico, exòticamente lícito, lìcitamente último, ùltimamente fácil, fàcilmente só, sòmente

but-

contraído, contraïdamente

miúdo, miüdamente

The circumflex designates the closed e and o and is used in monosyllabic, as well as bisyllabic and polysyllabic homographs; it is, however, omitted in dor, poço and cera, for example, since there are no such words as dór and céra, and the verb posso is spelled with the ss which distinguishes it from poço.

Cortês, cortêsmente sôfrego, sôfregamente cristã, cristãmente sêco, sêcamente cômico, cômicamente vã, vãmente

Omit the written accent in homographs where there is no question as to the meaning; thus we use the circumflex on-

sêco

lôgro

to distinguish them from the corresponding verbal forms-

With the e or o, open, omit the written accent in the plural, as-

secos

logros

but retain it in sêcas to distinguish it from the verbal form secas.

Also use vaidoso(s), vaidosa(s) without the accent on the penultimate syllable, even though the pronunciation is vaidôso, vaidôsos, vaidôsa(s).

The open o in the plural of the different substantives is the same as the closed o in the singular:

tijolo (tijôlo)

tijolos (tijólos)

but-

trôco

trocos

troco (verb)

The words $esp\hat{o}so$, $esp\hat{o}sa(s)$ take the written accent occause of the verbal forms with the open o, esposo, esposo(s), but the plural esposos does not take the accent because it is not a homograph.

Write pôr with the circumflex to distinguish it from the preposition por, but—

dispor

propor

expor

dispense with the written accent. The circumflex is used on the e in the following because the stress is on the last syllable:

português

cortês

tem

In the following the written accent is omitted because the stress has passed from the last to the next to the last syllable:

portugeses

portuguesa(s)

corteses

The accent is placed on árvore(s) because stress is on the antepenultimate syllable; arvore(s) (verb) does not take it because stress is on the penultimate. The imperfect and conditional verb forms, as

louvaria

deveria

puniria

louvava devia punia

take the accent if the stress is on the antepenult, as-

louvaríamos

louvávamos

devíamos

deveríamos

puniríamos

also on the penult of a form ending in a diphthong-

louváveis deveríeis

louvaríeis puníeis

devíeis puniríeis

but-

saía

tê-lo-á

The accent is used in all persons of the imperfect tense:

saía saíeis saías saíam saía

saíamos

because the i does not form a diphthong with the preceding a.

Use the written accent in proper nouns under the same conditions as in common nouns:

Pôrto Setúbal

Tomé

pôrto (to distinguish it from the verb porto) Pontével Nazaré

Pedrógão Belém

Antônio Águeda

Compound words retain their appropriate accents:

mãe-d'agua

pára-raios

pesa-papéis

The Rumanian is one of the smaller branches of the Romance family of lan-The Rumanian is one of the smaller branches of the Romance family of languages, and is a product of the changes which the ecclesiastical Latin suffered in the Roman Province of Dacia after the first century of the Christian era. It is highly impregnated with Magyar, Turkish, and Greek elements, and departs very decidedly from its sister languages.

The orthography has recently undergone another of its frequent reforms and d, ℓ , ℓ , ℓ , ℓ , ℓ , ℓ , and ℓ are obsolete, and ℓ nearly so.

Syllabication

This is very much the same as in the other Romance languages. Combinations of consonants, particularly those that produce a single sound, must not be separated.

As the Nordic alphabet has only 16 characters, kaun, tŷr, and bjarkan each have two sounds.

³ Soft s. 4 Hard s.

The runes, the earliest form of Teutonic writing, are believed to have come originally from southeastern Europe as they exhibit Gothic influence. They were, therefore, in contact with both Greek and Latin culture, and it is believed they had their origin in one of these classical alphabets, or possibly both. They have the same signs for the vowels a, e, and o, and the runes for f, h, and r are clearly taken from the Latin alphabet. They may, possibly, have come via some late Northern Etruscan alphabet, most of whose letters came from the Latin. In this connection, it is interesting to note the possible influence of the runes in the formation of the Cyrillic alphabet.

The original runes found in western Europe consisted of 24 letters divided in groups (oett) of 8. The first evidences of them are found in Denmark and date from the 3d century. They flourished all through the Anglo-Saxon period in England, for five centuries, but there they varied somewhat from the continental alphabet. From Denmark they were introduced into Sweden at the beginning of the 11th century and there they continued in use for centuries, in fact in some

remote districts almost up to the present day.

The relics found consist mainly of inscriptions on monuments, weapons and ornaments.

 S tochkoi.
 S kratkoi.
 Used also in place of Latin h.

<sup>Tverdy znak.
Indicates that preceding consonant is hard.
Miagky znak.
Indicates that preceding consonant is soft.
Now replaced by II,</sup>

The Russians use the Cyrillic alphabet, which has been modified so that it bears some resemblance to the Latin alphabet.

Punctuation is very similar to the English usage.

Capital letters are used in beginning sentences, for proper names, in addresses in letters, and in words referring to the Deity.

The 3 in the prefixes BO3, B3, B3, B3, B3, When it precedes c, is dropped.

Syllabication

1. A single vowel, with or without one or more consonants, constitutes a syllable.

2. Where a vowel is followed by but one consonant, the syllable ends on the

vowel, the consonant beginning the next syllable. Example: Ца-ри-ца.

3. Where a vowel is followed by more than one consonant, the syllable ends with the first consonant. Example: Зав-тра; Сол-дат.

4. The semiconsonants ъ, ь, and й, when they occur within a word, terminate

a syllable.

5. The prepositional prefixes без, до, пере, вы, на, не, от, за, пре, чрез, раз, and воз must remain intact.

and воз must remain intact.

6. The consonant combinations ств, ст, стр, бл, вл, мл, пл must not be

separated.
7. Where two or more words are used to form a compound, divide so as to keep each component part intact.

Transliteration

The Russian language being phonetic, transliteration is simply a matter of substituting the proper English values for the respective Russian letters, as Полтава=Poltava.

The following important points should, however, be carefully observed:

1. 5 and 5 are mute and indicate only that the consonant preceding such letter is, respectively, hard or soft.

быль=byl=he was. быль=byl'=a tale.

Note.—The apostrophe (') is used to indicate the soft consonant.

2. 'and e are to be transliterated by e only when hard, by ê when soft:

весь=ves'=all. поле=pole=field. ъмъ=fem=I eat.

REFORMED ORTHOGRAPHY AND GRAMMAR

The movement to reform the Russian orthography and grammar had its origin long before the Revolution. It was sponsored by many of the scientific and scholastic academies and institutions of the Empire, but resulted in no official action until after the Revolution. The old style is presented in this Manual, however, because of the great number of the old works that are still extant. The student will bear in mind the various changes given below when dealing with

present-day literature.

By the decree of the Council of the People's Commissars of October 10, 1918, relating to the introduction of the new orthography (Collection of Laws and Decrees of the Workers' and Peasants' Government no. 74, of October 17, 1918, item 804) all governmental publications, periodicals (newspapers and magazines) and nonperiodical publications (learned works, collections, etc.), and all documents and legal papers must, beginning with October 15, 1918, be printed according to the new rules of spelling given below. This spelling has also been introduced in all schools.

1. Replace the letter в by е (колено, вера, семя, в избе). (Сf. nos. 9, 10.)

2. Replace the letter e everywhere by ф (Фома, Афанасий, кафедра).

3. Drop the letter ъ at the end of words and parts of compound words (хлеб, посол, меч, контр-адмирал), but retain it in the middle of words as a sign of division (съемка, разъяснять, адъютант).
Note.—The apostrophe (') in the middle of words is also used instead of ъ.

4. Replace the letter i everywhere by и (учение, Россия, пиявка, Иоанн,

высокий).

5. Write prefixes из, воз, вз, раз, роз, низ, без, чрез, через before vowels and hard consonants with з but replace з by c before mute consonants (к, п, т, х, ц, ч, ш, щ, ф) also before с (расставаться, чресседельник, беспокойство, чересполосица).

Note.—This rule differs from the old one in that the prefixes 6e3, po3, upes, через were also added to this group and that s is now replaced by c before c.

6. In the genitive case of adjectives, participial adjectives, and pronouns of masculine gender write oro, ero instead of aro, яго (доброго, пятого, которого, синего).

Note.—Adjectives whose roots end in ж, ч, ш, щ, have in the genitive case

ero instead of ого (высшего, текущего, свежего, кипучего).

7. In the nominative and accusative plural of feminine and neuter adjectives, participial adjectives and pronouns write ые, не instead of ыя, ія (Добрые, старые, синие, какие). (Сf. No. 4.)

8. Use они instead of онъ in the feminine nominative plural.

9. Write in the feminine одни, одних, одними instead of однѣ, однѣх, однѣми.

10. Use ee instead of en in the feminine genitive singular personal pronoun. Note.—In connection with the discontinuance of it, the letter ë is sometimes

used to designate the fluctuating e sound (ёлка, всё).

11. Of all the rules on syllabication only the following are retained: When dividing words a consonant (one or the last in a group of consonants) immediately preceding a vowel must not be separated from this vowel; likewise a group of consonants at the beginning of a word must not be separated from a vowel; the letter \(\tilde{u}\) before a consonant must not be separated from the preceding vowel; also a final consonant, final \(\tilde{u}\) and a group of consonants at the end of words must not be separated from the preceding vowel. In dividing words having prefixes, a consonant at the end of the prefix, if preceding another consonant, is not to be carried over to the next line.

SAMARITAN

Name	Character	Transliteration and tone value	Name	Character	Transliteration and tone value
Aleph	X	_ , ,	Lamedh	2	l

This language is a dialect of the Aramaic of Palestine, the best examples of which are found in the literature belonging to the 4th century A.D., in which the alphabet derived from the old Hebrew was used. This had been used by the Jews up to the time of the Babylonian Captivity. The alphabet is still employed for writing Aramaic, Hebrew, and even Arabic. The literature is chiefly of a religious character.

The alphabet consists of 22 characters, and the text reads from right to left. Since there are neither vowels nor discritical marks above or below the characters, the following consonants are employed as yourselearned.

ters, the following consonants are employed as vowel characters:

$$\Lambda = a, e, \qquad \Pi = e, i,$$
 $\Pi = a, v,$
 $\Lambda = a, v,$
 $\Lambda = e, i,$
 $\Lambda = e, i,$
 $\Lambda = e, i,$
 $\Lambda = e, i,$

Punctuation

The last letter of a word is surmounted by a point; : or · or ·: are used at the end of a sentence; .. at the end of a phrase; =: or -<: at the end of a paragraph; and <::=: > at the end of a chapter.

SAMOAN

A E I O U F G L	a e i o u f g	a in father; also a in mat 1 a ee in keep o oo in book f ng in sing l; soft r before i or	M N P S	m n p s	m n p s , not sibilant as English t v	in
G L	g	l; soft r before i or after a , o or u				

¹ The distinction between long and short a is very important as a great many words spelled the same way have very different meanings: tamā, father; tăma, boy; tina, mother; tinā, wedge; fai, to do; fāi, to abuse.

The Samoan is a Malay language which became highly impregnated with Arabic centuries ago, and again in the last century absorbed a great many English and other European words.

The Samoan names for the consonants are fa, nga, la, mo, nu, pi, sa, ti, vi. In addition to the above letters there is a sound somewhat between h and kwhich has the value of a consonant and represents the k sound of other kindred dialects. It is called a "break" and is represented by an inverted comma: n'a, paper-mulberry. The word is in Niuean uka. It is a very important distinction between words that are otherwise similar in spelling and must be carefully observed: fua, fruit; fu'a, flag. It is also a general rule that two similar vowels cannot occur without a "break" between them.

Every letter is distinctly sounded, so that there are no improper diphthongs.

The proper diphthongs are au, ai, ae, ei and ou.

The k and r are retained in foreign words introduced into the Samoan language: Keriso (Greek, Christon), but d becomes t: Tavita, David; ph becomes f: Ferukia, Phrygia; g and hard c become k: Kanana, Canaan; h is also retained at the beginning of some proper names: Herota, Herod; z becomes s: Sakaria; w becomes u or v: Uiliamu, William; b becomes p: Petania, P

Syllabication

Every syllable must end in a vowel and no syllable can have more than three letters, a consonant and two vowels, the vowels forming a diphthong: fai, mai, tau. There must be a vowel between any two consonants.

Accent

As a general rule the accent is on the penultimate syllable, but there are many exceptions to this rule; where the accent is on the last, which take it on more than one syllable, or which take no accent whatever.

Reduplicated words take two accents: pălapăla, mud. In this way compound

words may have three or four accents.

Cardinal numbers

e tasi e lua e tolu e fa e lima e ono	four five six	e iva e sefulu e sefulu ma le tasi e sefulu ma le lua e sefulu ma le tolu e luafulu, e luasefulu e seleu	nine ten eleven twelve thirteen twenty hundred
e ono	six	e luafulu, e luasefulu	twenty
e fitu	seven	e selau	hundred
e valu	e ig ht	e afe	thousand

Ordinal numbers

Distributives are formed by prefixing ta'i to the cardinal: ta'itasi, one by one. The adverbial numerals are expressed by prefixing atu: 'o le atutasi, one by one; by prefixing fa'a: Ua'ou sau fa'alua, I have come twice; or by prefixing fo'i as well as fa'a: Ua fo'i fa'afa ona'ou alu, I went back four times.

SANSCRIT

Sanscrit, though no longer a spoken language, is still the classical language of Sanserit, though no longer a spoken language, is still the classical language of India and the key to her religious, philosophical, and legal literature, as well as the source of many of her modern languages. The earliest Sanscrit compositions date back as far as 1500 B.C., and it became the official language of the Indo-Aryan people in the 4th century A.D.

There are two principal periods in the history of Sanscrit literature, the Vedic and the Classical, which overlap somewhat; the first extending from 1500 to 200 B.C., and the second from 500 B.C. to 1000 A.D.

The alphabet comprises the following letters:

I. Five short and five long vowels, viz:

Short: 羽 a, 頁 i, 因 u, 程 ri, 硬 li, Long: 親 â, ई î, ज û, 程 rî, 電 lî.

II. Four diphthongs: ए e, ऐ ai, स्रो o, स्रो au.

Note that \mathbf{v} e is in most cases a combination of a and i, \mathbf{v} ai of â and i, श्रो o of a and u, and श्रो au of â and u.

- III. 1. Two slight nasals; the one, called anusvâra, is denoted by a dot - placed above the letter after which it is to be pronounced, e.g. \$\frac{1}{2} a\tilde{m}\$; the other, called anunasika, is denoted by a half-moon with a dot in it - and placed either above or after the preceding letter, in the latter case with an oblique dash under it, e.g. * or ग्रथ au.
- 2. An aspirate, called visarga, which is denoted by two dots, placed one above the other (:), e.g. A.
 - IV. Thirty-three consonants:
 - 1. Five gutturals: क ka, ख kha, ग ga, घ gha, ङ na,
 - 2. Five palatals: च cha, क chha, ज ja, च jha, ञ na,
 - 3. Five linguals: া ধ্র, ড tha, ভ da, ভ dha, আ na,
 - त ta, घ tha, इ da, ध dha, न na, 4. Five dentals:
 - 5. Five labials: प pa, फ pha, ब ba, भ bha, म ma,
 - 6. Four semivowels: य ya, र ra, ज् la, व va,
 - 7. Three sibilants: श्राट्य, घ sha, स sa,
 - 8. The soft aspirate: Ξ ha.

It is not possible to state positively what the original sounds of the letters were. However, the transcription of Hindu proper names in Greek and Latin literature, as well as some other facts bearing on this subject, enable us to give the Interature, as well as some other facts bearing on this subject, enable us to give the following rules with considerable confidence: a as in apt; \hat{a} as in far; i as in pin; i like ei in feeble; u as in full; i like oi in move; i like i in rid; i like i like i in red; i as in lid; i like i like i in to lead; i like i in fact; i as in the Italian mai; i as in note; i like i in our.

Before the semivowels i like i lik

spiritus lenis

The ka was like k in king; kha as in khan; ga like g in gun; gh as in afghan; na like ng in sing; cha like ch in church; chha like ch+h in Churchhill; ja like j in jet; jha like j+h; na like n in singe.

The unaspirated dentals and labials, the sa and the ha are all pronounced like the corresponding English letters; in the aspirated dentals and labials an h sound must be added: sha to be pronounced like sh in shun, and ca like a sharp ca in sit.

must be added: sha to be pronounced like sh in shun, and ça like a sharp s in sit.

The forms of the vowels and diphthongs, if preceded by a consonant, are as

follows:

ा
$$\hat{a}$$
, \hat{b} , \hat{c} \hat{i} , \hat{c} \hat{u} , \hat{c} \hat{u} , \hat{c} \hat{u} , \hat{c} \hat{i} , \hat{c} \hat{i} , \hat{c} , \hat{c} \hat{i} , \hat{c} ,

Some consonants also change their forms when combined with vowels. Thus

₹ ra	with	y U	becomes	T ru
-	n	a û	מל	Te rû
₹ ha	77	u w	22	F hu
Terretia	77	a û	ກ	a hu
_	22	e !i	22	ह्य hṛi
A ça	77	· 11	27	y çu
Weeken	מ	જ શે	57	मू çû
	33	e ri	ກ	मृ çri.

The declensions of nouns comprises three numbers: Singular, dual, and plural; and eight cases: Nominative, accusative, instrumental, dative, ablative, genitive, locative, and vocative.

The verb has the following stems: Present, aorist, perfect, and future, the latter being rare in the old language. The present stem is predominant in classical

Sanscrit.

There are three genders, as in English.

Accent

The accent was mainly a musical or tonic, not a stress. Three different types are distinguished: *Udātta* (raised), *anudatta* (unraised), and *svarita* (rising-falling), following the *udātta*.

Numerals

The system was constructed on a decimal basis; there are two separate names for the numbers up to 10, while up to 19 there are compounds of the units with the word for $10: d(\dot{u})yads\acute{a}$, 12; 20, 30, etc., are compounds that express a number of tens, and the intermediate numbers are formed by adding the various units: $p\acute{a}n\ddot{c}a$, 5; $p\acute{a}n\ddot{c}a\dot{s}at$, 50; $p\acute{a}n\ddot{c}apan\ddot{c}a\ddot{s}at$, 55. There are separate words for 100, 1,000, and 100,000, the latter, laksah, being post-Vedic. The numerals from 1 to 19 are adjectives, while the rest are substantives.

									_

In the western part of the country the language is written with Latin characters, while in the eastern part the Cyrillic are used. The language may be written equally well with either. The important differences are that in the Croatian diacritical marks are used to indicate phonetic values, and the letters follow the regular order of the English, while the Serbian follows the order of the Greek on which it was founded.

There are three dialects: the Southern, or jekavski; the Eastern, or ekavski, and the Western (Dalmatian), or ikavski, but only the first two have any literary

value.

Punctuation is practically the same as in English.

The accent is musical, and there are four different kinds: two long and two short. Of the former, the first is a rising inflection, marked by the acute sign ('), while the second is a falling inflection which is marked by the circumflex sign. (^). Of the short accents the first also has a rising inflection which is marked by the grave sign ('), while the second has a falling inflection and is either marked by a double grave sign ('') or is not marked at all. The stress is invariably on the first syllable.

Syllabication

A consonant between two vowels goes with the next syllable.

Where two or more consonants occur between two vowels, they are separated,

provided it is a combination with which no Serbian word can be begun.

The following consonants must not be divided: бл, бр, вл, вр, гв, гд, гл, гр, дв, др, зб, зв, зл, зм, зн, зр, кл, кљ, кн, књ, кр, мл, мн, мр, пл, пр, пч, п, пр, св, ск, сл, см, сн, сп, ср, ст, ств, стр, тв, тр, фл, фр, хл, хр, хт, цв, цр, чл, чр, цб, шк, шъ, шт.

Abbreviations

The following abbreviations will be helpful:

Toject, that is Г-ђа Госпођа, Mrs. ов.год. ове године, current year Г-ђица Госпођица, Miss и.т.д.и тако даље, et cetera Г.Г. Господа, Господо, gentlemen Господин, Мг. на пример, for example н пр. G-đa Gospođa, Mrs. ov.god. ove godine, that is G-dica Gospodica, Miss G.G. Gospoda, Gospodo, gentlemen G de Gospode, Ladies i tako dalje, et cetera i.t.d. na primjer, for example Gospodin, Mr. n.pr. G.

¹ Continental sounds are used in the transliteration.

This language belongs to the Tai group, and the alphabet was derived from a uth Indian source. The language is purely monosyllabic, each true word consouth Indian source. sisting of a single vowel sound, preceded or followed by a consonant. There are less than 2,000 of these monosyllables and, consequently, many of them serve for the expression of more than one idea, the variations being indicated, as in the Chinese, by the tone employed.

Siamese is written from left to right, and in the old manuscripts there was no spacing, although in modern writings it is used.

There are 44 consonants, each having inherent the vowel sound aw, and 32 vowels which are not indicated by individual letters but by signs that are placed either above, below, before, or after the consonants. Only vowel or diphthong sounds, or the letters m, n, ng, k, t, and p are permissible at the end of words, and where, as in foreign words, some other letter is final it is not sounded.

There are five simple tones: Even, circumflex, descending, grave, and high, and any one of these placed on a word will change the meaning radically. Four of these tones are indicated by signs placed over the consonant affected, while

the absence of a sign indicates that the fifth tone is to be used.

The consonants are grouped in three classes, each having a special tone, and thus the application of a tonal sign to a letter has a different effect, dependent

on the class to which the letter belongs.

The person, number, tense, and mood of a verb are indicated by auxiliary words when they cannot be inferred from the context. There are a great many adverbs, both single and compound. The prepositions are mainly nouns.

The subject of the sentence precedes the verb and the object follows it.

compound sentences the verbs are placed together.

SLOVAK

A A B C Č D ĎE É Ě F G H C I Í J K L L Ľ	a á b c č d d' d	a in father aa in German Haar b ts ch in church d dj in Hedjaz ee in German Seele ye in yesterday f g in gay h ch in Scotch loch e ie in field y k l t, trilled ly in lyric	NŇO Ó P Q RŘS Š T Ť U Ú Ů V X Y Ý Z Ž	n ň o ó p q r ř s š t ť ť u ú ů v x y ý z ž	$egin{array}{l} u \\ oo \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
L L M	l ľ m	$egin{array}{ll} l, ext{ trilled} \\ ly ext{ in lyric} \\ m \end{array}$	Ž		s (zh sound in French journal)

The δ , q, and x are used only in foreign words. Stress is consistently on the first syllable.

Capitalization

Begin sentences with a capital letter, but after exclamation and interrogation points only if these complete the previous sentence. Capitalize after the colon, as a general rule. Capitalize all proper nouns, including God and any word used to designate the Deity.

Syllabication

Divide on a vowel, but bear in mind that l, r, and v, often have the characteristics of vowels. The consonants sk, $\check{s}t$, st, and sd are inseparable and begin the following syllable. Division between two vowels is permissible. Compound words are treated as two separate words in regard to syllabication.

Punctuation is practically the same as in English.

SLOVENIAN

The Slovenian language is related to the Serbo-Croatian language, with which it forms the Yugoslavic language group.

The one-letter words, s, z, k and v, must not be placed at the end of a printed line.

Syllabication

Division is phonetical, though compound words are divided as though they were separate words, as, po-mlad (spring); the consonantal combinations dj, lj, nj, rj, tj, and ks must not be separated.

Proper nouns only are capitalized and punctuation is as in English.

Ñ	n	n			a diphthong with the
Ñ	ñ	ny			vowel following)

¹ Softer than in English, produced by joining the lips without pressure; between vowels, almost v.
2 Between g and e or i, silent, rendering the g hard.

Punctuation

Punctuation is practically the same as in English, and, in addition, inverted interrogation and exclamation marks are used at the exact beginning of the question or exclamation.

Si es así, ¿qué he de hacer? Pero, ¡ay de mí! no es posible.

Quotation marks begin the first paragraph of a dialogue. The succeeding paragraphs sometimes start with em dashes instead of quotation marks, and the latter are not used until the dialogue ends.

"¿Es así, señor?

-Sí; es verdad. -¿Cómo se puede averiguarlo? -No sé; pero es la verdad."

Capitalization

The English style of capitalization is followed, with few exceptions.

Adjectives derived from proper nouns are lower-cased, as las mujeres colombianas (the Colombian women) and los cruceros brasileños (the Brazilian cruisers). The first word of a question occurring within a sentence is lower-cased, as:

Cuando viene la noche, ¿cómo se puede ver?

Note the following forms of capitalization:

El señor Enrique Palava; el señor don Enrique Palava.

Days of the week and months begin with a lower-case letter. In titles of books only the initial and proper nouns, are capitalized: Historia crítica de España y de la cultura española.

Accents

(1) Words ending in n, s, or a vowel, and emphasized normally on the last syllable but one (penultimate), dispense with the accent mark.

(2) Words ending in a consonant except n or s, and emphasized normally on

the last syllable, dispense with the accent mark.

(3) Words not included in (1) and (2) require an accent on the syllable carrying the emphasis, as é-po-ca, se-gún, in-côg-ni-to. This includes verbs to which pronouns are appended, as pagaselo.

Words having a dual meaning, as mas (but) and más (more), do not fall under

these rules, and the proper accent should be carried.

Usually but one accent is used in a word, regardless of the number of syllables. Formerly the words, a, e, o, and u were accented, but this has become obsolete. However, changes should not be made without authority, as some authors follow the old custom.

When the word o (or) is used adjoining numerals, as 14 δ 15, the accent should

be used to prevent confusing the o with a cipher.

Syllabication

Words are usually divided on a vowel: a-si-mi-la-ción, pa-la-bras.

The letter y is considered a vowel when standing alone, or at the end of a word.

At the beginning of a word or syllable it is treated as a consonant.

The following combinations must not be divided: ai, au, ei, eu, ia, ie, io, iu, oi, ou, ua, ue, ui, uo (a-li-via-dor). This does not apply when either letter carries an accent (pa-is, ri-o), which permits the vowels to be separated, but exceptions are made in certain cases.

The combinations of ay, ey, oy, and uy may be separated only when followed by a vowel, but must not be separated when followed by a consonant or when

occurring at the end of a word:

A consonant occurring between two vowels should be carried over: com-po-sición.

Do not separate the following combinations of two consonants:

Two separable consonants standing between vowels are divided: ac-ta, chas-co, cuer-da, pron-to.

The letters ch, ll, and rr are never divided and always begin a syllable, as

ria-chue-lo, gue-rri-lla, fe-rro-ca-rril.

Prepositional prefixes form a separate syllable, as: des-agradable, pre-colombiano; but when the prefix is followed by s and another consonant, the s is joined to the prefix. Examples: abs-tener, cons-trucción, but ab-solver.

A syllable cannot begin with s followed by a consonant, as cir-cuns-tan-cia.

The liquid consonants l and r, when preceded by any consonant other than smust not be separated from the consonant, except in uniting parts of compound words. Examples: ha-blar, po-dría, sub-lu-nar, ab-ro-gar, es-la-bón.

Double c and n may be divided as in English: ac-ce-so, in-na-to.

Abbreviations

Spell out names of countries, States, and Provinces, whether town is given or

not.

Titles preceding names are usually spelled out, but both forms are permissible; uniformity should be adopted when possible. Observe the following form: el Sr. (or señor) Enrique Palava.

L	1	l; silent before j	21	a	
	1	,	13		short, e in wren
M	m	m	Ö	Ö	ö in German Götter
			1		

¹ Before l, r, and v, and before the hard vowels a, a, o, u, as well as at the end of words. Before the soft vowels \ddot{a} , e, i, y, and o it has what is called the "tje" sound, nearly equivalent to ch.

² Before e, i, j, y, \ddot{a} , and \ddot{o} , sh, sk, and stj are pronounced as sh.

The Latin alphabet is universally used in Sweden, with the addition of the letters \mathring{a} , \ddot{a} , and \ddot{o} . The a, o, u and \mathring{a} are hard vowels; e, i, y, \ddot{a} , and \ddot{o} soft vowels. C, q, w, x, and z are used only in words of foreign origin and in proper names.

Accents

Accents are used only in foreign loan words (resumé) and in certain proper names (Tegnér).

Capitalization

Capitals are used almost as in English: At the beginning of a sentence, in proper names, but not in the case of adjectives derived from them. The names of the months and the days of the week are not capitalized.

Syllabication

A consonant between two vowels usually goes with the following vowel ($l\ddot{a}$ -ra-re); when two or more consonants occur between two vowels, the last consonant generally goes with the following vowel (fladd-ra); sch and sk when used for the $s\dot{g}$ sound are not separated, but added to the following vowel (mar-schera, $m\ddot{a}nni$ -ska); ng remains with the preceding vowel unless n and g belong to different parts of a compound word. Compound words are divided according to their component parts.

Punctuation

The rules of punctuation are essentially the same as in English, although the Swedish punctuation is perhaps somewhat closer, the comma, especially, being used more freely.

Articles

Common gender Neuter gender Indefinite article ettenDefinite article: -en, -n -na (rarely -ne) Postpositive Singular Plural -et, -t-na, -a, -enSingular ·det den_ Prepositive Plural de

The postpositive article, which is suffixed to the noun, is always used when the noun is definite in sense; the prepositive article is used together with the postpositive article when the noun is modified by an adjective.

The Tagalog is the most important of the Philippine languages, of which there are some three score.

The vowels e and i are very often confused, but e does not exist in pure Tagalog.

Syllabication

Division is on the vowel and a consonant goes with the following vowel; two consonants between vowels are separated, but \widetilde{ny} being a single letter must not be separated.

Capitalization

The capital letters are used for initials of proper names and at the beginning of a sentence.

Accents

The Tagalog uses three accents, the acute, grave and circumflex.

The acute may fall on any syllable, but usually the last or next to the last. In a word ending with a vowel the accent indicates that the vowel has a broad sound and that the suffixed particles an and in prefix an h when joined to such words: Um'utang, to borrow; mag'utang, to lend; magpa'utang, to lend freely. In some cases the suffixing of han or hin draws the accent one syllable nearer the end of the word.

As a rule words not carrying an accent take the stress on the last syllable if ending with a consonant, except in the case of n or s, when stress is on the next to the last syllable.

The grave accent marks words ending in a vowel which take an or in, instead of han or hin, and the stress is on the preceding syllable: Batà, child, pronounced "bahta." The grave accent is not used in words ending with a consonant.

The circumflex is used only on the final vowel of words ending with an abrupt, obscure vowel sound on which the stress is placed, and permits only an or in as a suffix: Dumalitâ, to endure.

Proper accentuation is very important as many words are only distinguished by the accent, differing entirely in meaning: Gátas, milk; gatás, trail; sumílang, to rise; sumílang (stress on last syllable), to pass between.

Articles

The article of proper nouns is si and is generally prefixed to nouns designating persons related or well known to the writer, as well as terms of endearment; it may also be used with the proper name of an animal belonging to the speaker. It is declined as follows:

Nom. Joseph si Joseph Si Joséph Nom. Joseph's; of Joseph Ni Joséph Ni Joseph Nac. Joseph Abl. From, with Joseph $kay \ José$

The plural article for names when coupled with words is declined as follows:

siná José

ang búkid nina José Dat. Acc. ang kaná José búkid Abl. From, by Joseph and his -

The article of common nouns is ang, and is declined as follows:

Singular Plural Nom. ang ang mañgá the Gen. nang, sa nang mañgá, sa mañgá of the Dat. sa sa mañgá to, for the Acc. nang, sa nang mañgá, sa mañgá the Abl. sa mañgá, nang mañgá nang, sa from, with the

There is no indefinite article, though the numeral isá (one) may be used.

Numerals

In Tagalog there are four classes: Cardinals, ordinals, adverbials, and distributives.

Cardinal numbers

isá. twenty-one one dalawang pouó't isá dalawá two tatlong pouó thirty tatló three apat na pouó forty apat 1 four limang pouó fifty limá anim na pouó five sixty anim 1 six pitong pouó seventy pitó seven walong pouó eighty waló eight siyam na pouó ninety sivam nine isang dáan, sangdáan hundred sangpouó ten sangdáa't isá hundred eleven labing isá and one labing dalawá twelve sanglibo thousand dalawang pouó twenty

Tamil is the language spoken in the Madras Presidency, Tanjore, Tinnevelly, Coimbatore, Chittoor, and the Nilgris, as also in the coffee and tea districts of northern Ceylon. It is the oldest, richest, and most thoroughly organized of the Dravidian languages, and has also the distinction of having fewer Sanscrit words than any of the others.

Tamil has borrowed words from the Hindustani, Arabic, Persian, and, more recently, English, while a few Tamil words have crept into the English, as curry (kari), mulligatawny (milagu, pepper, and tannîr, cool water), cheroot (suruttu), and pariah (pareigan).

The characters shown in the table have changed but little in the past 500 years. They differ from the other Dravidian alphabets, both in shape and phonetic value.

The alphabet is well adapted to express the 12 vowels of the language $(a, \bar{a}, i, \bar{\imath}, u, \bar{u}, e, \bar{e}, o, \bar{o}, ei$, and au), but the consonantal sounds are very meagerly served; the character k must also serve for kh, g, and gh, and, occasionally, h, while ch also serves for s; of the other surd consonants, ch, t, t, and p, each represents the remaining three sounds of its class. Each of the consonants k, ch, t, t, and p has its own nasal.

The short a remains with the consonant, but, if it should separate, a point will be placed above the letter. All the other vowels will remain either before or

after the consonant.

In addition to the four semivowels, there are a cerebral r and l, as also a liquid l, that was formerly a feature of all Dravidian languages, the sound, however, varying in different districts. There is also a peculiar n, differing in function though not in pronunciation, from the dental n.

Vowel ligatures

The consonants are classified as follows:

1. Hard k \acute{s} t t p r2. Soft (nasal) \mathring{n} \tilde{n} \mathring{n} n n m n3. Medium (semivowels) y r \mathring{l} v r l

Divide words on any syllable, but do not separate a consonant from its vowel. The period is the only punctuation mark used.

Telugu is one of the most important of the five great Dravidian languages, and is spoken by the non-Aryan subjects of the nizam of Hyderbad as well as some who are under British rule. These occupy the territory extending from a point north of the city of Madras and extending northwestward to Bellary (where the Telugu meets the Kanarese), and northeast nearly to Orissa. It is the only descendant of the Andhra dialect of the Old Dravidian and is strongly impregnated with Sanscrit.

The text reads from left to right. Vowel signs are very similar to the Deva-

nāgarī.

Vowel signs

The consonant is inherent with the short a, even where the "hook" \checkmark is missing, while the other vowel ligatures are as shown in the table.

There are a number of dialects in the three groups which, with the Burmese, comprise the Burman language family. This language was first reduced to writing in the middle of the 7th century A.D., and the letters, which are really a variation from those of the Indian Sanscrit of that period, follow the same arrangement as the Sanscrit. The text reads from left to right.

The 30 consonants are considered to have an a sound and are as follows:

ka, k'a, ga, nga, ca, ca, ja, nya, ta, t'a, da, na, pa, p'a, ba, ma, tsa, ts'a, dza, wa, z'a, za, 'ha, ya, ra, la, s'a, sa, ha, a.

The Sanscrit cerebrals were introduced later and are written by the ta, t'a, da, na, and s'a, which were turned to face in the opposite direction as shown in the table.

There are also a large number of ligatures made by combining two or more

letters, and each ligature will form a syllable.

The vowels are a, i, u, e, and o which are not distinguished as either long or short, except in loan words.

The all-important feature of the language appears to be euphony.

The cases of the nouns are indicated by suffixes, and the plural is indicated by adding one of several words of plurality.

The language has personal, demonstrative, interrogative, and reflexive pro-

nouns, as well as an indefinite article which is also the numeral "one".

The verb is really a kind of noun or participle and has no element of person, denoting the tense and mood by an external inflection or the addition of auxiliary

verbs and suffixes when the stem cannot be inflected.

The Tibetans have developed tones along the same lines as the Chinese. It is quite improbable that any of the original consonants were hard, since many of these old soft consonants, which are hardened in the modern language, are preserved in the Tibetan classics of the period extending from the 7th to the 9th centuries.

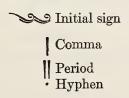

The table shows the older text, known as the dbu-can, which has been preserved in the sacred literature. Later this was followed by an italic-like face, known as

dbu-med, as well as a more flowing text: akhyug-yig.

The Osmanic-Turkish language is the most important member of the Turko-Tartar language group. It is highly impregnated with both Arabic and Persian words, but its grammar is both clear and simple.

The language has a fixed rule that a strong vowel (a, o, and u), must be followed by a similar vowel, and, likewise, a weak vowel is followed by a weak vowel; e.g., dere (valley), dereler (valleys), ada (island) and adalar (islands).

Until the introduction of the modified Latin alphabet the Turks used the Arabic alphabet with the addition of three Persian characters. Of the many different styles formerly in use the one that was the most popular was the Ryk'a, which is here reproduced.

The text was written and read from right to left.

While Turkey has adopted the Latin alphabet it is well to bear in mind, before taking up the Latinized form, that it is very important from a philological standpoint to acquire a knowledge of the old Arabic script, its grammar, spelling, and pronunciation before taking up the New Turkish.

TURKISH (New)

ABCCDEFG ĞHI ÎJKK	abcçdefg šhi	a in father; also a in past b 1 j in joint ch, hard d 1 e in red f in fay g, hard, sometimes mute between consonants g, soft, nearly gh in eight h, always i in ring; long, as in ma- chine i in high j in French journal k, hard	L M N O O P R S S T U U V Y	l m n o o o o p r s s s t u u u v y	<pre>l m In words with k like n o in or; also o in note oe in Goethe p¹ r s in sun sh in shape t u in push; long as in through ue in German ueber, or u in French musée v in vain y in yet</pre>
K K	k K		Y Z		
		.,			

¹ In using the new alphabet p is sometimes substituted for b, as edip instead of edib, kutuphane instead of kutubhane; this is also the case where t is substituted for d, as alaettin instead of alaeddin. is not always correct.

Remarks for transliterators

The language is practically phonetic; there being no silent letters, diphthongs or compound consonants, each is invariably the symbol of but one sound.

The soft vowels are e, \ddot{o} , \ddot{u} , and i.

The soft \check{g} cannot be used as the initial or final letter of a word.

The y is not always a consonant, as it sometimes takes the place of i, usually at the end of a word.

When the circumflex is used over a, i, or u, the sound is long, but a and a after

g, k, and l are used for softening these consonants.

There is no silent e in the Latin transliteration, nor has the Turkish a vowel sound corresponding to a in man, o in not, e in her, or i in bird, and o in not.

An infallible table for transliterating from the Arabic into the New Turkish

is out of the question, as only a thorough knowledge of the Turkish will enable one to determine whether a vowel is hard or soft, or whether words are correctly spelled or pronounced.

There is practically no accent, the long vowels replacing, to some extent, the accent in other languages, but without stress.

Capitalization

Capitalize proper names, both personal and geographic, but lower case the latter when used adjectively.

Capitalize the first word of a sentence, but lower case, as a rule, after a colon. Capitalize the name of the Deity as also the first word in a line of poetry.

Syllabication

Divide on a vowel, but diphthongs must not be separated.

A consonant goes with the following vowel, but if there be two consonants, they are separated.

The Uighurs were a Turkish people who reached a high state of culture only in the time of their descendants who inhabited the region comprising the Provinces of Kashgar and Khotan, and extending from the Orkhon to what is now Eastern Turkestan during a period beginning about the eighth century. Their chief city, Chotscho, which is now merely a ruin, lies some 19 miles east of the present city of Turfan.

The alphabet was not, as formerly commonly believed, derived from the Syriac

Estrangela but owes its origin to an unknown Semitic text. The Manchu, Mongolian, and Kalmuck alphabets have their origin in the Uighuric.

The existing literature is entirely of a religious character, and a great many of the works are Buddhistic, some are Manichaeistic, while the minority are Christian. The authors, following a Manichaeistic custom, were very fond of decorating the pages of their books with a great profusion of miniatures and ornamental scrolls, and the existing remnants are a perpetual source of admiration to book lovers. In the main they were printed from blocks after the manner of the Chinese and were often embellished with wood cuts. The text reads from right to left although, at times, probably under Chinese influence, it was written in columns, reading from the top downward, the columns, unlike the Chinese, reading from left to The striking similarity of a number of the letters to one another adds to the difficulty in reading the language.

Syllables must not be separated; and if there remains any space at the end of a line, a space is inserted between the last and next to the last letters, or else an

extended final letter is used. These letters are shown in the table.

The following punctuation marks are used:

UKRAINIAN

Cha	racter	Transliteration and tone value	Remarks on tone value
A B B	а б в	$egin{array}{c} a \\ b \\ v \ (w) \end{array}$	After vowels and at close of syllable has weak u sound
Г	г	g (h)	Before unvoiced consonants and at close of syllable it becomes a weak x
Д Ц	Ґ Д	$\stackrel{\dot{g}}{d}(g)$	Softened to gi before e- and i-sounds
Д Е Ж	e e	$\overset{e}{je}$	Open e as in ever After p like ie
Ж	ж	ž (voiced)	Like j in French journal Voiced as in saw

Ю	щ	šč	
R	OI R	$egin{array}{c} \jmath u \ j a \end{array}$	After p like u or a
Ь	ь		Soft sign

The Ukrainian language group is also known as Ruthenian, and its territory is bounded on the west by the Polish and Czech, and extends eastward over southern Russia to the districts of Kharkov and Woronesch. In the north it extends to Minsk and Tschernigov where White Russian is used.

The language is remarkably uniform when we take into consideration the great variation in conditions in the widely separated portions of its realm. The

number of dialects is very small.

In ordinary literature the Russian alphabet introduced by Peter the Great is used, though the Cyrillic alphabet is still employed in religious books. characters r, r, and ī have been added, while the Russian letters ъ, ы, ѣ, ә, ө, and v are not used.

Syllabication is the same as in Russian and punctuation as in English.

¹ Depending on its location in the word.

Urdu is an Indo-Aryan dialect spoken by some 25,000,000 people. Its history

Syllabication is the same as in the Arabic.

dates back to the early part of the nineteenth century.

With the exception of some dialectic differences, its grammar is like that of the Hindī but differs from the latter in its extensive vocabulary, which contains large numbers of Persian and Arabic words, so that it might well be termed the Persianized Hindostani of the educated Moslems. Some European words have also been incorporated, especially English technical terms. Because of the large number of Persian words, it can be written best in the Arabic characters, with the addition of some characters used to represent non-Arabic sounds.

Vowel and reading signs

Sukūn ° or $\hat{\ }$ is sometimes written $\check{\ }$, but all the other signs are as in the Arabic.

Punctuation (used only in modern prints)

- ! Interrogation mark.
- Period.
- + End of an extract.

WENDISH

Q, v, and x are used only in foreign words, and for the first kw is quite generally used, while ks takes the place of x; f is always used for the ph sound, as fosfor, phosphorus.

Stress is invariably on the first syllable.

Capitalization

Capitalization is practically as in English.

Syllabication

The general rules of the west Slavic languages are followed in the division of words.

YIDDISH

Yiddish, or Judaeo-German, is the language spoken by Polish and Russian Jews whose forbears, early in the Middle Ages, emigrated to Poland from the Rhineland. They carried the German language with them, but soon absorbed words from the languages of the countries in which they lived as well as Hebrew words.

The Yiddish uses the same letters as the Hebrew (see p. 77), with the Ashkenazic pronunciation; it also is read from right to left.

All Hebrew letters are consonants, but when employed in Yiddish κ , τ , τ are made to represent vowel-sounds.

The vowel-sounds a and o are represented by k e.g., או מיר, מסל dos; e is represented by v e.g., פֿר, v fir; u is represented by v e.g. and v fain; v is represented by v e.g., פֿרן, v bein, v fain; v is represented by v e.g., פֿרן, v fain; v fain; v is represented by v e.g., פֿרן loib.

In addition to the vowel-letters, the Hebrew vowel-points are also frequently employed.

Syllabication

A single consonant between two vowels belongs to the next syllable: וו־צּעּ nu-tsig, אַלאַפּאָ־טעף ka-po-te.

Of two consonants between two vowels one belongs to the preceding, the other to the following syllable e.g., אַל־טונג sin-ken, שּפּאַל־טונג spal-tung.

The letter ' preceded by אָ אָי אָ and followed by a vowel, belongs to that vowel: אָראָדיען na-ra-yen, my-ve-ven; when followed by a consonant, it belongs to the preceding syllable: אַריקע stoi-ke.

The combinations טש, שה, וש, ה representing simple sounds, are inseparable and belong to the next syllable: ראַ־טהען ka-vi-ren, הוושען hu-zhen, ראַ־טהען ra-then, שביטהען

Prefixes and suffixes are distinct syllables: גע־דריקט ge-drikt, פער־שטאַגד fer-stand, גע־דריקט glik-lich, פער־שאַפט freind-shaft.

In dividing words at the end of a line the rules of syllabication must be observed. At the end of a line, compound words should be divided into the simple words of which they consist: דר"פוס drei-fus, האנד־טוך hand-tuch, ויינש־פּינגערל vinsh-fingerl.

AMERICAN INDIAN LANGUAGES 195

INTRODUCTION

Before European contact the Indians north of Mexico had not evolved any system or systems for recording their languages by means of either phonetic or syllabic signs. In 1809-21, a Cherokee named Sequoyah invented a syllabary, based on the characters in our own alphabet, which was well suited to his language, was rapidly adopted by his people, and was used in the printing of parts of the Bible and a native weekly newspaper, The Cherokee Phoenix.

With this exception, systems of writing and printing Indian tongues in this portion of North America have been devised either by missionaries desiring to

convert the natives to Christianity or by linguists whose interests were purely

scientific.

In the former case (consult in the subjoined material Chippewa, Cree, Eskimo, Kalispel, and Muskokee) the characters used were simpler and some of the systems attained a certain amount of currency for a time, being used more particularly in religious works, but all, as well as that of the Cherokee, soon began to fall into disuse as the younger generations of Indians acquired a knowledge of English, and without exception they will be entirely discontinued within a rela-

tively short time.

Aside from the Cherokee syllabary, systems of representation used most widely were those of the Chippewa, Muskokee, and Choctaw. The Muskokee or Creek alphabet was officially adopted by the Creek Nation, and many Creeks are still able to employ it. The Choctaw alphabet is that upon which the one contained in the present work is based, and differed from it principally in using r for !, v for a, and an underscore with the vowels (a, i, o, u) instead of the superior n (aⁿ, iⁿ, oⁿ, uⁿ) to represent nasalized vowel sounds. The Dakota system here given, founded on the widely used alphabet of S. R. Riggs, came nearest of all

to enjoying both missionary and scientific currency.

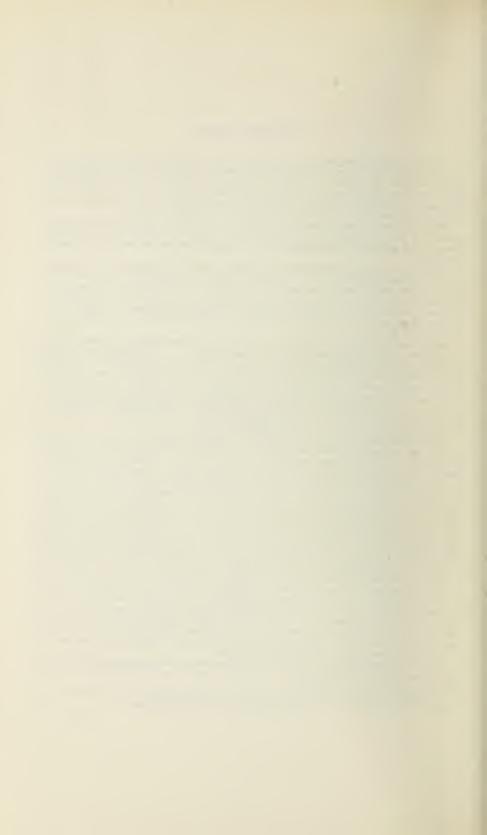

The systems devised solely by students of language are not, of course, intended for popular usage but merely as contributions to a scientific study of the languages in question. In some cases, owing to the extinction of a dialect or because the work has been done in an exceptionally thorough manner, the system of a single student will persist for all time, but if several investigators have studied a variety of speech, the phonetic signs may be progressively amplified or one or more conflicting systems may arise. Numerous and serious efforts have been made, both in the United States and abroad, to introduce a uniform series of characters, and special mention may be made of the system of the International Phonetic Association and that suggested by a committee of the American Anthropological Association for use in recording Indian tongues. This last was published by the Smithsonian Institution as volume 66, number 6, of the Smithsonian Miscellaneous Collections, Washington, 1916. But Indian languages vary so widely and investigators themselves approach the study of them from such different angles that there seems to be no prospect of avoiding a considerable diversity of usage. The languages in the accompanying sketch, other than those mentioned above,

illustrate almost entirely the alphabets and phonetic devices used by scientific students of Indian tongues. That of Olbrechts, a painstaking modern worker in Cherokee, may be contrasted with the syllabary of Sequoyah, invented for practical use, in order to appreciate the varied forms linguistic representations may take in response to differing demands.

Unless otherwise indicated, the vowel values of the various languages are those of the continental system, and consonantal sounds are approximately those of

the same characters in English.

Diacritical marks over or after letters merely indicate the position of the stress, unless otherwise indicated in tables of phonetic values.

CADDOAN

8	As in father	r	r trilled, in Pawnee and Ari-
a	As u in but		kara ²
a b	b	s	A surd, more sibilant than in
	sh in show		English
c d	Sonant	t	t, intermediate 3
e c h i	a in fate	tc	Affricative in Caddo; more
ϵ	e in met 1		intermediate in Arikara
h	h	ts	Affricative intermediate; in
i	ee in feet		Caddo it is surd
L	i in hit	u	oo in hoot
k	Intermediate, neither sonant	W	Slightly more rounded than
	nor surd		in English
m	m	X	Almost ch in German ich
n	n	У	y
0	o in go	ω	aw in law; in Wichita
D	p	ai	ei in height; in Caddo
1	-		, , , , ,
		11	

¹ In the Pawnee this sound is made with the lips very wide, the aperture between them forming a very narrow slit, and the e does not have the usual diphthongal quality.

² In Kitsai and Wichita, where a distinct n occurs, the r more nearly approximates the English r, but is not made as far back in the mouth nor trilled as strongly.

¹ Pawnee final t is nasalized, indicated by superior n (tⁿ). Caddo t is a surd.

The above phonetic system is used by Drs. Lesser and Weltfish for the

languages of the Caddoan stock.

The Caddoan linguistic stock is composed of four major languages: Pawnee, Wichita, Kitsai (Kichai), and Caddo. The Pawnee now occurs in three dialects; the Wichita and Caddo probably each included several dialects, though but one form is known, while the Kitsai has never developed dialectic differentiation. Pawnee, Wichita, and Kitsai are mutually unintelligible, and Caddo is the most divergent of the four languages.

Diacritical marks

The glottal catch (') and the aspiration (') are used in the usual way. Stress is indicated by the prime (') after the syllable: a'. Vowel length is indicated by a raised period (') after the vowel: a:; vowel shortness, by a breve (_) under the vowel: a. Pitch accents are, a for high tone, and a for middle high. Tone combinations occurring in Pawnee are, a' high to middle high, a' normal to middle high, a middle high to normal, and a middle high to high.

Whispered or faintly articulated sounds are indicated by superior symbols: to.

CHEROKEE

- a Long, open, as in far
- ā Long, closed, as in German Wahl
- c Unvoiced, as in shut
- A Voiceless, oral vowel
- â Open vowel, as in far
- a Nasalized vowels, but more commonly with less pronounced
- a nasalization
- d Voiced, as in dawn
- dj Voiced, as in George
- dz Voiced, as in hands up
- D Intermediate between voiced and unvoiced dental
- D_n Voiced nasal, as in near, but preceded by a hardly audible d sound
- D₁ Voiced, as in lid, but preceded by a hardly audible d sound
- e Closed vowel, as a in baby¹
- vowel of indefinite quality, as e in father
- ε Long open vowel, as in air
- ε· Long nasal, as in French pain
- g Voiced consonant, as in go
- i Closed vowel, as in pin
- I Voiceless, oral vowel
- ι Open vowel, as in seat
- j Voiced, as in French jambe
- k Unvoiced, as in back
- k Unvoiced, but pronounced farther back than k
- k' Unvoiced, aspirated, as in come, but more emphatic
- l Voiced as in lid
- l Unvoiced l
- m Voiced, as in mother
- n Voiced nasal, as in can
- N Voiceless nasal, followed by a strong nasal aspiration
- n Voiced, as in sing
- o Closed vowel, occurs only in songs
- ö. Nasalized (usually long), as in French un
- o Open vowel, as in not
- 5 Very short vowel, as in German Götter
- o Voiceless, oral vowel
- o Nasalized vowel (usually long), as in French bon
- 5ⁿ Nasalized vowel (very short), as in German Götter ²

¹ This sound is rarely heard in Cherokee, and then always finally; it seems to be a contraction of ϵ (nasalized long ϵ +i).

² When only a slight degree of nasalization is heard a superior ⁿ is used after the vowel, instead of a hook under it, as in cases where nasalization is more pronounced.

CHEROKEE—Continued

- Unvoiced fricative, as in sing
- Unvoiced as in hit t
- t.e Unvoiced, aspirated, as in tin, but with aspiration more emphatic
- Prepalatal affricative, unvoiced, as in China tc
- Dental affricative, unvoiced, as in ants ts
- Lateral affricative, unvoiced l, preceded by unvoiced dental stop tł
- Closed vowel, as in nook u
- ń. A short vowel sound between a and ö
- Voiceless, oral vowel U
- Open vowel as in spoon υ
- Semiconsonant 3 W
- Unvoiced palatal, as in German nicht X
- Semiconsonant³ y
- Dental, voiced fricative, as in gaze

Note.—Phonemes that are scarcely audible and occur frequently as weakly articulated vowels are indicated by small superior letters: 9.4, e.i, uw, iy, etc.

Diacritical marks

- Indicates aspiration. Indicates glottalization.
- Indicates nasalization.
- Combination of the spiritus asper and nasalization hook indicates strong nasal aspiration.
- n Indicates slight nasalization.
- After a vowel indicates that it is a long vowel.
- After a vowel indicates very long quantity. After a vowel indicates an abnormally short vowel.
- After a vowel or consonant indicates a very slight pause.

- After a phoneme, indicates primary stress.

 After a phoneme, indicates primary stress.

 Over a vowel, indicates rising pitch.

 Over a vowel, indicates falling pitch, but this and the preceding mark can be combined to ', ie., "falling-rising," or to ', i.e., "rising-falling" pitch.

³ This letter may be strongly aspirated, when it is followed by a spiritus asper ('), but it may be voiceless when it is rendered by a small-capital letter. The w is often preceded by a barely audible u sound, and the phoneme is written uw.

CHEROKEE SYLLABARY

In old prints this is erroneously called "Cherokee Alphabet"

D a	Re	Ti	5.	Ou.	₽ v
Sgu Oka	Je ge	y gi	Ago	J gu	E gv
Tha	Phe he	Ani	Hao	Thu	Who ho

Cua	Vise	Tri	tso	J isu	C ^M _{tsv}
Cua	QQ _{we}	O ri	Owo .	S _{su}	6 w
Sa	Bre	3 ,i	fayo	C~yw	B yv

Vowel sounds

- a in father; short, as a in rival
- a in hate; short, as e in met i in pique; short, as i in pit

- o aw in law; short, as o in not u oo in fool; short, as u in pull v u in but, nasalized

Consonant sounds

- g g, nearly, but approaching k d d, nearly, but approaching t h, k, l, m, n, q, s, l, w, and y as in English

Syllables beginning with g, except f, sometimes have the power of k; Λ , S, Care sometimes sounded to, tu, and tv, and those written with tl, except g, sometimes change to dl.

CHINOOK

The Chinookan stock embraces a number of closely related dialects which were spoken on both sides of the Columbia River from the Cascades to the sea, and some distance up the Willamette Valley. There were two principal dialects, Upper Chinook and Lower Chinook. These were again subdivided into slightly The Chinook proper of the Lower Chinook is treated here. different dialects.

The phonetic system is characterized by a superabundance of consonants and

consonant-clusters, combined with a great variability of vowels.

The series of consonants may be represented as follows:

	Sonant	Surd	Fortis	Spirant	Semi- nasal	Nasal	Lateral	Semi- vowels
Glottal	€							
Velar	(g?)	q	q!	X				—
Palatal	g	k	k!	×				
Anterior pala-								
tal		k.	k:!	X.				—
Alveolar	(d?)	\mathbf{t}	t!	s, c		n	(1)	(y)
Dento-alveo-								
lar affrica-								
tive	_	ts, tc	ts!, tc!			-		
Tabial				70	n1	777	222	(***)
Labial				— p		- m	ın —	, ,
Lateral				LI LI	1/1	1, 1		

The system of vowels and semivowels may be written as follows:

Diphthong	Semi- vowel				Vow	-		Semi- vowel	Diphthong
Dipititions	10WC1				E	C15		101101	Dipititions
au	w	u u ū	0 0 ō	ô (ô) â	A a ā	ê ê ä	(E) î (e) i ē (ī)	У	ai

The accent affects the character of the vowel upon which it falls and modifies consonants insofar as certain consonants or consonantic clusters are not tolerated when they precede the accent.

The small-capital letter indicates an obscure sound. The circumflex is often used instead of the breve.

Has the sound of ai in hair. ä

ô Like o in top.

Like aw in law. â

u oo in soon. wh in who; when final, this sound is pronounced less distinctly. hw

c sh sound, quite generally. Like ch in the German ich. X

Similar to tch or ch in English. tc

Laterals (L) similar to dl; L, similar to tl or kl; l, a surd, somewhat similar to thl.

Fortis = Explosive.

The glottal stop is a sonant stop.

AI ai	i in pine	AU	au	ow in how
-------	-----------	----	----	-----------

NASALIZED VOWELS

A^n	an)	These are pure nasals, and retain the vowel sounds, except
I^n	i ⁿ	before the letter k, when they are like the long ang, ing,
O^n	o^n	ong, ung. The usual sound is softer than ang, and like
U^n	u ⁿ	that of the French vowel followed by n in the same syllable.

Each consonant has but one sound and the sounds ascribed to the vowels are as indicated in accented syllables, while in unaccented syllables they have the sound of short vowels. Do not give the English sound to the vowels, except as indicated in the alphabet.

The Choctaws were a prominent Indian tribe of Muskhogean stock. They are now located in eastern Oklahoma and in Mississippi and officially number about

18,000 pure bloods.

CREE

¹ Some syllables are strongly aspirated for which the h is not always adapted, and so the Greek asper(') has been adopted, usually at the end of the syllable aspirated. Some words depend on the asper for their signification: ukochin, he hangs, but uko'chin, he hangs in a liquid, he floats.
² The pronoun I is nela at Moose Factory; nena at Albany, Severn, and York Factory; neya on the east main coast; netha at English River, and neva at Isle à la Crosse.
³ Used at Moose Factory only; elsewhere n, y, th, or r are substituted.
⁴ The sh sound is confined principally to Moose Factory and vicinity, and we have sheshep, duck; sheshepish, small duck, while elsewhere sesep and sesepis are used.

The Cree is an Algonkian Indian tribe occupying a large territory in Canada, extending from Hudson Bay west to Manitoba and Saskatchewan. They are in the main a forest people, though one branch is known as the Plains Cree. They number about 15,000, including mixed breeds, which was probably about their original number.

M	m	m	Ų	ų	yowels)
N	n	n	,		Glottal stop 1

¹ Following s, s, and h (not glottalized s, s, and h).

The Dakota is the largest confederation of Siouan tribes, occupying the northwestern plains of the United States. Numbering about 25,000, they now occupy 10 reservations in several States.

Note.—Glottalized p', t', and k' must be distinguished from p, t, and k followed by a vowel which opens with glottal closure.

Syllabication

As a rule every vowel ends a syllable, but the following are exceptions:

1. The nasal n always closes a syllable, as ka-hin-ta, sweep.

2. A syllable, contracted by dropping the vowel, is attached to the preceding syllable, thus making it close with a consonant, as: i-pih-ya, cause to boil, from i-pi-ga, boil, and ya, cause.

3. The words en, in, and is (he, she, it) and their compounds do not close the

syllable with a vowel.

Accents

A misplaced accent is as bad as a mispronounced letter, for it often changes

the meaning of a word; as má-ga means field and ma-gá means goose.

Most words are accented on the second syllable and thus accent marks are not usually printed; also all words beginning with wo are accented on the first syllable, and the accent marks are not printed. In all other cases the accent is printed and should be carefully noted.

 $^{^1}$ K has often a deep guttural sound something like we would pronounce rk or ak, and it is then represented

by a q. ² Nq is a deep nasal sound frequently heard amongst the natives. ³ S and r are often pronounced forcibly.

There are peculiarities in the pronunciation of the Eskimo language that cannot

be described, but must be acquired by intercourse with the natives.

The accents are: ', short and sharp; ¬, long and sharp; ¬, long and dull.

While the above is the generally accepted alphabet, the vocabularies from Labrador westward to the Aleutian Islands, including Greenland, differ very widely.

\mathbf{L}	J	Z	s voiced, rare
r	r^3		

¹ These are uvular consonants, so called because they are articulated at the uvula; q is a stopped voiceless consonant.

2 These are articulated nearly alike, bilaterally, with the tip of the tongue against the back of the upper

9 Before i, e, and u it is often aspirated, especially when the t is long.

Accent and quantity

Two or more sounds may follow each other in a word without being shortened, and every sound, whether consonant or vowel, may be short or long, apart from the fact that the voiced consonants, in case they are lengthened, become unvoiced (except the nasals). Thus four types of combinations are possible: Short vowel + short consonant, short vowel + long consonant, long vowel + short consonant, and long vowel + long consonant.

teeth.

3 In some sections becomes an untrilled palatal r, as in Arab, but with a firmer pressure against the palate.

4 Frequently this sound is so loosely articulated that it may be described rather as a nasalized g fricative.

5 Uvularized o is rather closed like o in so, followed by the Eskimo fricative r or q.

6 Rather different than the English r, but somewhat similar to the German back r, when untrilled. Its articulation is especially tense when it is followed by q.

7 When the r stands alone between vowels, its place of articulation is often somewhat advanced, and the friction is not very tense; in some districts it is nasalized.

8 In rs it resembles the English s; in ts the articulation of the s is tenser.

9 Before i.e. and uit is often asyntated, especially when the t is long.

Voiceless and aspirated (terminally only):
At at et it of

The sibilants s and c occur only initially, elsewhere they are replaced by 's and 'c, respectively. The spirant 'after back vowels is nearly intermediate between a surd velar spirant and our h, although after front vowels the effect is more palatal. It always occurs before initial vowels and ai. The stops g, d, and b are articulated more forcibly than in English and never occur initially; before terminal voiceless vowels g becomes gk; d and b (both rare), do not occur in final syllables. Voiceless n, m, y, and w are phonetic modifications of n, m, y, and w, respectively, before terminal voiceless vowels. The affricative dc occurs initially and medially, except in final syllables; dc occurs mostly in final syllables, though also in medial ones. 'k, 't, 'p, and 'tc are given as a series, because (outside of verbal compounds after 'ä-, nī-, kī-, and wī-, where they are transformations of k, t, p, and tc), they correspond in Cree to a sibilant followed by k, t, p, and tc, or, more rarely, followed by k, t, p, tc; 'p, 't, and 'tc never occur in terminal syllables nor initially. The surds k, t, p, and tc are unaspirated, and k never occurs in terminal syllables, p and tc rarely.

¹ ä, e, i, and u are open; ī and ō are closed.

HUPA

The Hupa belongs to the Pacific Coast division of the Athapascan linguistic stock and is spoken by Indians living on the lower portions of Trinity River in northern California.

Consonantal continuants predominate among the sounds composing this language, resulting in an absence of the definiteness produced by a predominance of stops as well as the musical character imparted by full, clear vowels standing alone or scantily attended by consonants.

The complete system of consonants is as follows:

	St	ops		Continuants		
	Sonant	Surd	Spirant	Affricative	Nasal	Liquid
Glottal		é	h (')	_	_	_
Velar		q	X			
Palatal	—	k (<u>k</u>)	$h\underline{\mathbf{w}}(\underline{\mathbf{w}})$		ñ	_
Anterior Palatal	g, gy	k, ky	ц (lateral)	{tc, tcw, dj} L (lateral)	_	l (lateral)
Dental	d	$t(\underline{t})$	s	ts, dz	n	_
Labial		-	$h\underline{w}$ (\underline{w})	· 	m	_

The consonantal sounds are the same as in Chinook, except gy, and ky are used instead of g and k; k and t are the same as k! and t!.

The nine vowel sounds and two semivowels are represented as follows:

The vowels are formed with much less movement of the lower jaw and lips

than is employed in the corresponding sounds in English.

Words or syllables rarely begin with a vowel, but semivowels and consonants are frequent initially. Many syllables end in vowels, and when final in the word, and bearing the accent, some vowels, under certain conditions, seem to develop semivowels after themselves, becoming diphthongs. This is especially true of the vowel a in the roots of verbs.

The term Iroquois was originally applied to a group of five tribes at the time The term froquois was originally applied to a group of five tribes at the time united in a strong confederacy, both for offense and defense, and inhabiting what is now central and eastern New York State. Other names were: Five Nations, the League of the Iroquois, and the Six Nations after they adopted the Tuscaroras in 1722. They were never numerically very strong but reached a commanding position by an incisive and unexcelled diplomacy, an effective political organization founded on maternal blood relationship, both real and fictitious, and by an aptitude for coordinate political action, all due to a mentality superior to that of the neighboring tribes. In fact they dominated the greater part of the Great Lakes region during the latter part of the seventeenth century.

¹ ee, oe, aie, ĕe, äe. ³ This is either in initial or final: 'h, ĕe', o'. ⁴ This mark precedes or follows a sound: 'a, o', ä', äe'.

KWAKIUTL

This is one branch of the two languages of the Wakashan stock which is spoken by a number of tribes inhabiting the coast of British Columbia and extending southward to Cape Flattery in the State of Washington. It has three main dialects, each of which is divided into subdialects which differ somewhat in phonetics, form, and vocabulary. That spoken by the Kwakiutl tribe of Vancouver Island will be treated here.

The phonetic system is very rich, abounding in sounds of the k and the l series.

The system is represented as follows:

	Sonant	Surd	Fortis	Spirant	Nasal
Velar	g	q	q!	X	
Palatal	g(w)	k(w)	k!(w)	$x^{u}(w)$	
Anterior palatal	g· ´	k·`´	k•!` ´	X.	n
Alveolar	ď	t	t!	s(y)	
Affricative	dz	ts	ts!		
Labial	b	р	p!		m
Lateral	L	Ĺ	Ĺ!	ł, l	
Glottal stop,	·			,	
1,	h, y	, w			

The vowels are quite variable, the indistinct E being very frequent. The two pairs i e and o u probably represent each a single intermediate sound. The entire series is represented as follows:

By certain grammatical processes, consonants may be weakened or hardened, and these processes reveal a number of unexpected relations of sounds. For example:

Spirants	Hardened	Weakened
X	X^{ϵ}	X
х (w)	€W	W
x'	n	۴n
S	ts!	y or dz
ł	e]	Ī

^u Indicates a u position of the lips. The others are the same as in Chinook.

ë is an intermediate between ē and êī. (w) = w quality accompanying the sound.

MAIDU

The Maidu (or Pujunan) stock comprises the various dialects of the language spoken by a body of Indians in northeastern California. The dialect spoken in the mountain valley extending from Big Meadows south to the Sierra Valley is given here.

The phonetic system is only moderately extensive. The glottal catch is but little used. A peculiar feature is the existence of two weak inspirational sonant stops B and D, the exact formation of these sounds not being clear. They occur, as a rule, only before ö, and the difference between them and the ordinary b and d is, in some cases, very slight, while in others it is very marked.

The consonant system is presented as follows:

	Sonant	Surd	Fortis	Spirant	Inspirant	Nasal
Palatal	g	k	k!	X		ñ
Alveolar	ď	\mathbf{t}	t!	<u>x</u>	D (Ö)	n
Dento-alveolar					<u>`</u>	
Labial		р	p!	<u></u>	в (ö)	m
Lateral	1	_				
Glottal catch	(')					
		h	У	w		

The vowels are quite variable, and one of the most characteristic features of the use of vowels is the fondness for ö, ä, and ü sounds. The vowels are as follows:

Words may begin with a vowel, h, y, or w, or with any consonant except x or ñ, though most of them begin with a consonant, most commonly t, k, b, or p. The most frequent initial vowels are a, o, and e.

K	r	nie ior ni			

The Muskokee or Muskogee Indians were the dominant tribe of the Creek Confederacy, and their language is usually called Creek, but the confederation included some peoples speaking related dialects and some speaking unrelated, or only distantly related, dialects. They have given their name to the Muskhogean linguistic family which includes several other languages, including Choctaw (q.v.). The Muskokee language is also spoken by the greater part of the Seminole Indians.

NAVAHO

a æ b c d e gyghwh. i j, kw	a in art a in lather b Composite of t and s d in dig a in fate g in get g, followed by a glide g, soft gw, labialized h in her Glottal spirant e in peer j in judge k in kirk, aspirated qu in quick h it in took it	m n n n n n n n n n n n n n n n n n n n	l in lad Surd of l; no English equiva- lent m in man n in name Indicates ellipsis of a vowel; also stress o in more ch in German Licht s sh in shall t, strongly aspirated t-is in it is oo in foot w in wart, a semivowel Interchangeable with q
	k in kirk, aspirated	w	
k	k-it in tack it	У	Palatal
ky	Denotes absence of aspiration, sometimes kq	Z	z in zigzag

The Navaho Indians are an Athapascan people living in northern Arizona, related to the Apache and probably like them of northern origin. They now number some 25,000 pure bloods.

Remarks

Capital letters are not used.

A long vowel is indicated by an inverted period after the vowel: a, e, i, o, u, æ.

An unusually short vowel is indicated by a breve after the vowel: a, e, i, o, u, æ.

Nasalized vowels are indicated as follows: a, e, i, o, u, æ: these may also carry

the long or short signs: a, a...

The colon is used to indicate the absence of a diphthong: a:i, e:i, a:o.

Punctuation is the same as in English, with the exception of the colon just mentioned.

Accent

Syllables are not regularly stressed as in English according to some rule, but the Navaho either raises or lowers the tone, and thus syllables may have either

level, raised, or lowered tones.

When used, the acute accent usually indicates a rising inflection of the voice. In polysyllabic words its position will indicate the point of rising inflection and show that both preceding and following syllables require an even or slightly lowered tone. When the acute accent occurs twice the tone is either even, or waving from high to low to high.

Syllabication

The vowel or diphthong sounded by itself forms a syllable: æ, ai, but aa, a'i, a:i, ai, having two distinct impulses, represent two syllables. The syllable may, therefore, begin with a vowel and end there, or it may begin with a vowel and end with a consonant, or a consonant may begin the syllable, followed by a vowel. The usual rule, therefore is a succession of consonants combined by a single impulse exerted in their utterance, and two consecutive syllables require two impulses which are separated in some manner: cxa:ats' os (a-ts' os).

			1			

¹ The sound of the initial letter is scarcely audible.

The Osage Indians lived in Missouri and Arkansas prior to their removal to the present State of Oklahoma. Their speech belongs to the Siouan family. While their original population consisted of 5,000, they now number in the neighborhood of 2,200.

The accent is the most important item to be considered in the Osage words.

The Pima Indians are a semi-civilized tribe living on their reservation in southern Arizona.

TAKELMA

This language was spoken in the southwestern part of the present State of Oregon, along the middle portion of the Rogue River and certain of its tributaries.

The consonant system is represented as follows:

	Aspirated tenuis	Voiceless media	Fortis	Spirant v. unv.	Lateral	Nasal
Labial	р	b	p!	w - w	_	m
Dental	t.	d	t!		l	n
Sibilant			ts!, ts:!	s, s.		
Palatal				y	(ł)	
Guttural	k*	g	k!	X		
Faucal	_	_	€	h		

In the above table the spirants have been arranged in two columns, the voiced and the unvoiced. The rare palatal lateral I is also voiceless. Any of the above consonants may occur initially, except the voiceless labial spirant -'w, which occurs only with k at the end of a syllable. The catch (') as an organic consonant occurs only medially or finally, the I only initially. The pronunciation of w, s, y, h, l, m, and n does not differ materially from the English.

The simple vowels appear, quantitatively considered, in two forms, short or long, or, quite appropriately called, pseudodiphthongal, meaning that a long rowal normally consists of the corresponding short yowel plus a slight reartise.

The simple vowels appear, quantitatively considered, in two forms, short or long, or, quite appropriately called, pseudodiphthongal, meaning that a long vowel normally consists of the corresponding short vowel plus a slight rearticulation of the same vowel (indicated by a superior letter), the whole giving the effect of a diphthong without material change of vowel-quality in the course of production.

Vorgela

vowers						
Short	Long	Sh	ort dip	hthong	Long	diphthong
a	$\bar{\mathbf{a}}^{\mathbf{a}},\;(\bar{\mathbf{a}})$	ai, au,	\mathbf{al}	am, an	āi, āu,	āal, āam, āan
e	e ^e , (è)	ei, eu,	el,	em, en	èi, èu,	ēel, ēem, een
i	$\bar{1}^{i}$, $(\bar{1})$	iu,	il,	im, in	īu,	īil, īim, īin
o,(u)	$\bar{o}^{\acute{\mathbf{u}}},\; (\bar{o})$			om, on	$\bar{o}i, \bar{o}^{u}(w),$	ōul, ōum, ōun
, , ,	, , ,	(\bar{o}^u) ,	(ul), ((um), (un),	, , , , ,	
ū	$\bar{\mathrm{u}}^{\mathrm{u}},(\bar{\mathrm{u}})$			ūm, ūn	ūi, ū ^u (w),	ūul, ūum, ūun
	, , ,	$(\bar{\mathbf{u}}^{\mathrm{u}})^{'}$,	,	, , , , ,	, ,
ü	ü ^ü , (<u>ü</u>)	üi, uw,	ül,	üm, ün	üi, ü ^ü (w),	ü ^a l, ü ^a m, ü ^a n
	, , ,	(ijü)	,	,	, , , , , ,	,

The ü has a sound between that in the German Mütze and muss. O is the same as u in rude.

Under proper syllabic conditions, i and u may, respectively, appear in semi-vocalic form as y and w; thus \bar{o}^u and \bar{u}^u appear as \bar{o}^w and \bar{u}^w when followed by vowels. Similarly ai, au, \bar{a}^i , and \bar{a}^u may appear as ay, aw, and $a^a w$, and correspondingly for other vowels. Sometimes, though rather unusually, a diphthong may appear in the same word either with a semivowel or vowel as its second element, depending on whether or not it is followed by a connecting inorganic a.

TSIMSHIAN

This language is spoken on the Skeena River in northern British Columbia and

on the islands farther to the south.

Its phonetic system is in many respects similar to that of other languages on the north Pacific Coast, abounding, particularly, in k and l sounds.

The system of consonants is represented as follows:

210 0,00011 01 0011011111111111111111111		Stop	3		Affricati	ves	Cont			sals

Note.—Both vowels and consonants may be long, and the length is indicated by a point following the letter. All accented syllables are lengthened, some of the length being accorded to the terminating consonant. Unless otherwise indicated, the primary accent is on the first syllable and the secondary accent, in words of four or more syllables, on the penult. Compound words retain their original accents.

The Zuñi Indians, numbering less than 2,000 individuals, live on their reserva-tion in western New Mexico.
